

Instructions for CB-3000, THE CURVE & CB-6000

Lubricate the head and shaft of the penis using silicone lubricant. Put the product on while in a relaxed state.

U-Rings: Put the U-Ring under and behind the testicles and penis. Your kit comes with 5 different sized U-Rings. Choose the size that provides a snug, but not tight fit. We also offer 2 extra large sized U-Rings available for purchase separately.

BASE #1 & #2: Insert the Base # 1 with the guide pins facing out, away from the body through the holes in the U-Ring. Slide the Base # 2 piece onto the guide pins forming a solid ring. Make sure to push the penis in a down position while attaching Base # 1 & Base # 2.

LOCKING PIN: Insert the locking pin through the center holes in Base # 1 & Base # 2.

SPACERS: The spacers are designed in such a way that each spacer fits a particular locking pin.

Your kit comes with either 3 (CB-3000 & The Curve) or 4 (CB-6000s & CB-6000) locking pin and spacer combinations. Choose the one that provides a snug, but not tight fit.

CAGE: Insert the penis into the cage. Push the penis down in order to avoid pinching when connecting the cage to the ring.

PADLOCK: After assembling the ring, guide pins, locking pin and spacers to the cage, attach the brass padlock. Make sure to have a diligent Keyholder!

CLEANING PRODUCT: Use System JO Toy Cleaner and a soft brush to clean. Do NOT use household cleaning products.

NOTE: Always take the time to smooth any loose skin around the rings and cage for the most comfortable fit.

Tight cage? Try the Stocking Trick: Some customers have success fitting into a tight cage by using something called the stocking trick. You cut the foot out of a nylon stocking and insert the open end through the tip of the CB-6000 slot. Pull most of the stocking through the slot. Insert penis into stocking. Gently push CB-6000 tube onto penis. Slowly slide stocking off by pulling it back out through the slot in reverse. That should pull the penis down into the tube with no discomfort and it should get you all the way down in there without the painful bunching of skin. Using the silicone lubricant that came with your package may help with this.
