How to Install and Launch on a Mac

WD Discovery is a light weight desktop application for Mac and Windows that provides a cloud based method of delivering software, updates and notifications for external USB drives. WD Discovery can be manually installed on computers that do not have an internet connection like any other software application

 Important:

- An active internet connection with ports 80 and 443 available are required for software and firmware update notifications to occur
- WD Discovery will install or Update existing versions of WD Drive Utilities to the version included with WD Discovery
- Existing installations of WD Software supported by WD Discovery will prompt the user that a new version is available through the WD Discovery environment

**Installing WD Discovery on a Mac**

1. Go to the WD Discovery Download Site and download the software

2. Once finished, run the software

3. Click on **Install Now**

4. Enter the Mac user's **password** , click **OK** and wait for the installer to complete the installation
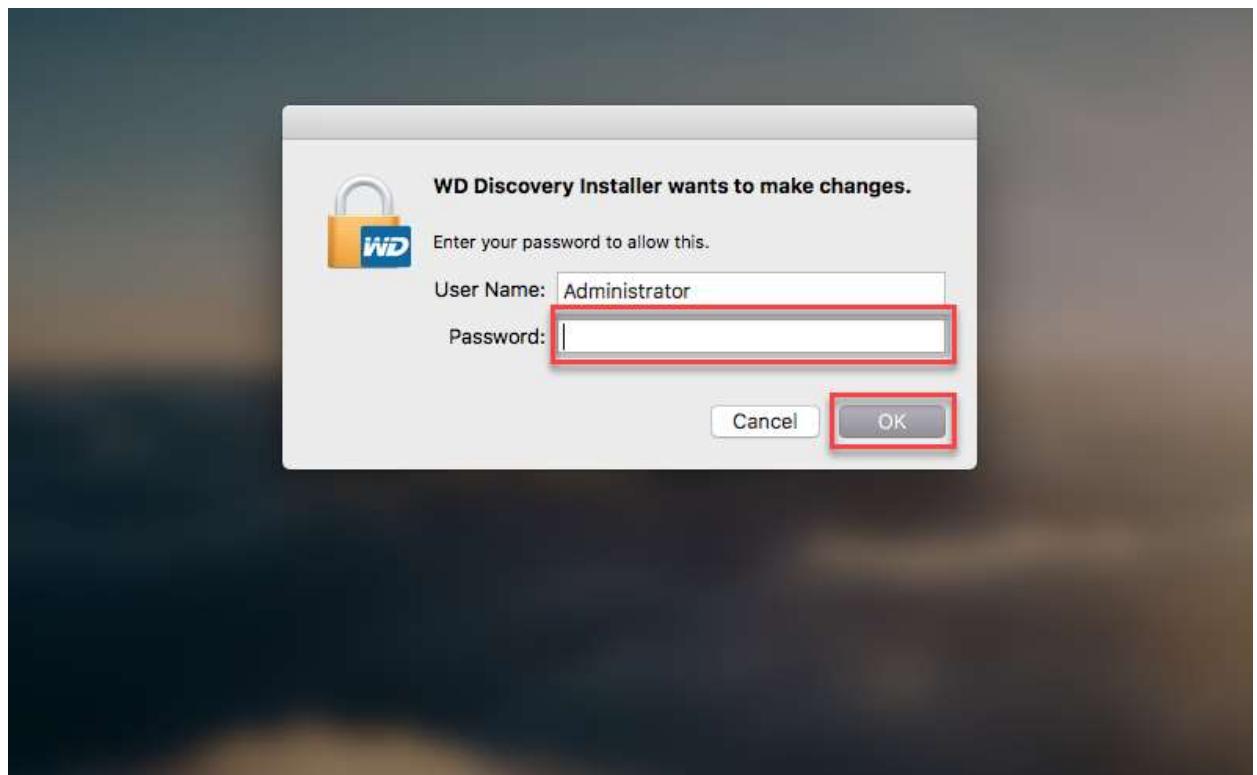

5. From Apple menu bar, click on the **WD** icon to open **WD Discovery**
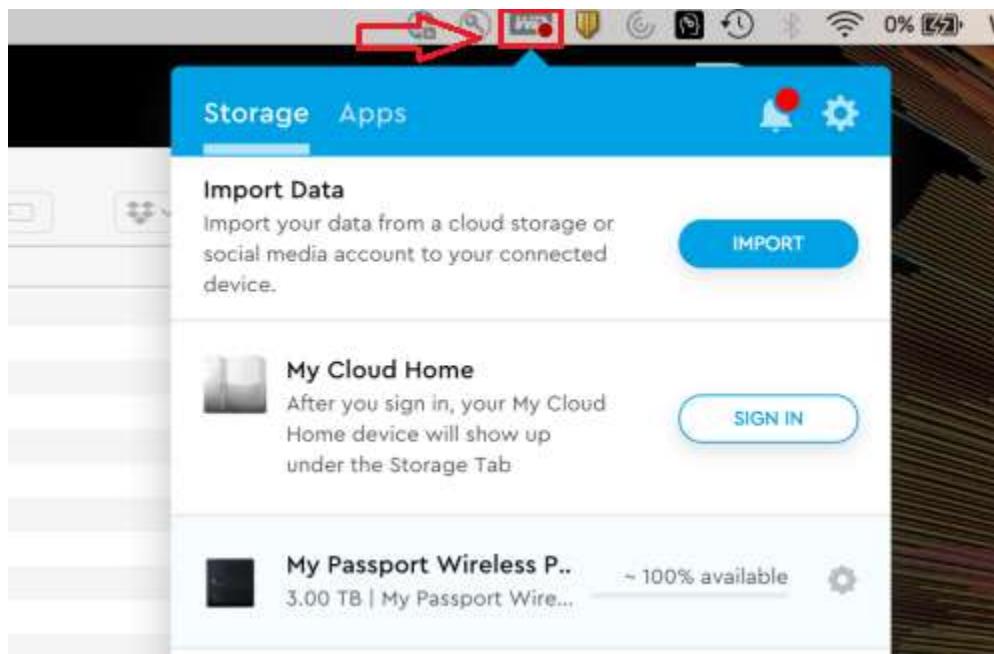

How to Access Files on the Device
