1. SAFETY

1.1. General safety notes.
1.1.1. The operator of the machine is responsible for, and has a duty of care in making sure that the machine is operated safely and in accordance with the instructions in this user manual. Keep the manual safe and pass it on if the machine is loaned or sold to another user.
1.1.2. Please note the following safety points.
1.1.2.1. The machine should never be left in a condition which would allow an untrained or unauthorised person/s to operate this machine.
1.1.2.1.1. All due care and diligence should be taken by the operator for the safety of, and with regard to, those around whilst using the machine.
1.1.2.1.2. Some or all of the following - warning signs, symbols and/or PPE pictograms may appear throughout this manual. You MUST adhere to their warning/s. Failure to do so may result in personal injury to yourself or those around you.

⚠️ DANGER
 Indicates a hazard, which, if not avoided, could result in serious injury or death.

⚠️ WARNING
 Indicates a hazard, which, if not avoided, could result in serious injury.

⚠️ CAUTION
 Indicates a hazard which, if not avoided, might result in minor or moderate injury.

⚠️ NOTE
 Indicates a situation that could easily result in equipment damage.

READ and keep the manual safe and pass it on if the machine is loaned or sold to another user. You MUST fully read instructions to make sure you use and operate machine safely. Appropriate Personal Protective Equipment (PPE), MUST be worn at all times when Machine is in use or being repaired.

1.2. Carbon monoxide (where applicable).
1.2.1. Carbon monoxide is a colourless and odourless gas. Inhaling this gas can cause death as well as serious long term health problems such as brain damage.
1.2.2. The symptoms of carbon monoxide poisoning can include but are not limited to the following; Headaches, dizziness, nausea, breathlessness, collapsing or loss of consciousness.
1.2.2.1. Carbon monoxide poisoning symptoms are similar to flu, food poisoning, viral infections and simply tiredness. It is quite common for people to mistake this very dangerous poisoning for something else.
1.2.2.2. To avoid carbon monoxide poisoning DO NOT use Petrol/Diesel- powered equipment inside any of the following; Home, garage, tent, camper van, mobile home, caravan or boat.
This list is not exhaustive and if you are in any doubt contact your dealer.
1.2.3. If you think you have or someone around you has been affected by carbon monoxide poisoning;
1.2.3.1. Get them fresh air immediately, by leaving the affected area or by opening doors and windows. If safe and practical to do so
make sure that the machine is turned off. DO NOT enter a room you suspect of having carbon monoxide present – instead call the emergency services.

1.2.3.2. Contact a doctor immediately or go to hospital - let them know that you suspect carbon monoxide poisoning.

1.2.4 DO NOT use in an enclosed area or a moving vehicle.

1.3. General fuel safety (where applicable).

**CAUTION**

**ALL FUELS ARE FLAMMABLE**

1.3.1. Fire hazard - keep fuel away from all sources of ignition for example heaters, lamps, sparks from grinding or welding.

1.3.2. DO NOT carry out hot work on tanks that have contained fuel it is extremely dangerous.

1.3.3. ALWAYS keep work area clean and tidy.

1.3.4. ALWAYS clean up all spills promptly using correct methods i.e. absorbent granules and a lidded bin.

1.3.5. ALWAYS dispose of waste fuels correctly.

1.4. Fueling/De-fueling (where applicable).

**CAUTION**

**ALL FUELS ARE FLAMMABLE**

1.4.1. ALWAYS fuel and defuel in a well-ventilated area outside of buildings.

1.4.2. ALWAYS wear correct, suitable and fit for purpose Personal Protective Equipment (PPE), suggested items are but not limited to safety gloves and overalls.

1.4.3. When fueling/de-fueling ALWAYS avoid inhaling fumes

1.4.4. When de-fueling ALWAYS use a propriety fuel retriever.

1.4.5. ALWAYS carry fuel in the correct and clearly marked container.

1.5. Electrical safety (where applicable).

1.5.1. Electricity can kill - NEVER work on LIVE/ENERGISED equipment.

1.5.2. Prior to carrying out any maintenance work you MUST Identify electrical isolation methods and isolate all electrical supplies,

1.5.3. Prior to use and with all electrical supplies isolated You MUST check all electrical cables, plugs and connections for the following;

1.5.3.1. Are intact and have no signs of damage, to include but not limited to bare wires, chaffing, cuts and loose wiring.

1.5.3.2. If there are any signs of damage, the damaged item MUST be taken out of service until the damage has been repaired by an electrically competent person.

1.5.3.3. All trailing cables should be routed so as not to cause any kind of trip hazard.

1.5.3.4. NEVER work on or near electricity with wet hands, wet clothing, and wet gloves.

1.6. Batteries (where present).

1.6.1. Batteries present a risk if they become damaged by the possible leaking of electrolyte. This electrolyte is an acid and can cause serious burn injuries. Care should be taken when working on or near them. NOTE the electrolyte may be in liquid or gel form.

1.6.2. Should you come into contact with electrolyte you should;
1.6.2.1. Remove all clothing contaminated with electrolyte. If you cannot remove then saturate in water.

1.6.2.2. Get medical assistance as soon as possible. You must advise the medical staff of the type acid.

1.6.2.2.1. Lead/acid battery = dilute sulphuric acid

1.6.2.2.2. Nickel/cadmium = potassium hydroxide alkali electrolyte.

1.6.2.3. Use fresh running water to wash off excess electrolyte, continue this until medical assistance arrives. Make sure that you do not wash the electrolyte to another part of the face or body.

1.6.2.4. If electrolyte comes into contact with Eyes the electrolyte needs to be immediately washed away with large amounts of water. Make sure that you do not wash the electrolyte to another part of the face or body.

1.6.3. Gasses from charging batteries are highly flammable and great care should be taken to charge in well ventilated areas.

1.6.4. There is an explosion risk if the battery terminals are short circuited, when connecting/dis-connecting ALWAYS exercise great care so that the terminals or battery leads are NOT allowed to touch and cause a spark. ALWAYS use suitable insulated tools.

1.7. Vibrations (where applicable).

1.7.1. Prolonged use of hand held (operated) machines will cause the user to feel the effects of/from vibrations. These vibrations can lead to white finger (Raynaud's phenomenon) or carpal tunnel syndrome. This condition reduces the ability of the hand to feel and regulate temperature, causing numbness and heat sensations and may cause nerve damage.

1.8. Noise (where applicable).

1.8.1. The operating noise of the machine can damage your hearing. Wear hearing protection such as earplugs or ear defenders to protect your hearing. Long-term and regular users are advised to have hearing checked regularly. Be especially vigilant and cautious when wearing hearing protection because your ability to hear alarm warnings will be reduced.

1.8.2. Noise emissions for this equipment is unavoidable. Carry out noisy work at approved times and for certain periods. Limit the working time to a minimum. For your personal protection and protection of people working nearby it is also advisable for them to wear hearing protection.

1.8.3. See CERTIFICATE of CONFORMITY section for Outdoor Noise declaration of conformity.

1.9. Additional safety labels.

Keep all children, bystanders and helpers 15 meters from the machine.
Warning against flying objects wear helmet, goggles and ear protection.

Warning: Danger from hot components, especially exhaust - Keep clear of combustible materials.

1.10. Additional safety instructions.

1.10.1. This machine may only be used for trimming grass, weeds and brushwood. Never use for other purposes, as this may result in serious injury! Safety instructions must be observed. DO NOT EXPOSE YOURSELF OR OTHERS TO THE RISKS. Follow these general instructions -

- ALWAYS wear safety goggles for eye protection.
- Long hair must be tied back.
- DO NOT wear loose clothing or jewelry that could get caught in moving parts of the machine. Safe, strong, non-slip safety shoes should be worn.
- It is recommended that the legs and feet are fully protected, to protect themselves during the operation against flying objects.

1.10.2. Check the entire machine for loose/missing parts (nuts, bolts, screws, etc.). Tighten/replace before using the machine. DO NOT use accessories with this machine other than those recommended/supplied by the manufacturer. Otherwise serious injuries to the user or bystanders as well as damage to the machine will result.

- Keep the handles free of oil and fuel.
- ALWAYS use the correct interface handles and shoulder strap.
- DO NOT smoke when mixing fuel or when filling the tank.

- DO NOT mix fuel in an enclosed area or near open fires.
- Make sure sufficient ventilation / ventilation.
- Mix and store the fuel mixture in a correctly marked container, which is allowed by local regulations.

1.10.3. During and after use the engine and exhaust will be very HOT you must keep all your all parts of your body and clothing including all combustible materials clear of the engine and exhaust.

1.10.4. DO NOT use the machine during or after rain, snow or sleet. The floor will become slippery. DO NOT use the machine on a slope or uneven ground or if there is the chance of slipping or losing the stability.

1.10.5. If you trip or fall whilst machine is in use you MUST immediately release the throttle, and turn off the ignition switch.

1.10.6. If you hit any obstacles you must stop the machine and remove the HT lead so that you can inspect the machine. IF the machine is damaged in any way you MUST get it repaired before restarting work.

1.10.7. DO NOT use a damaged machine or a machine with a blunt, cracked or damaged cutter blade or trimmer head.

1.10.8. When using the blade cutter there is a danger of kickback. Kickback is a reaction that can occur when the rotating cutting blade strikes an object which cannot be cut. This contact causes the cutting blade to stop for an instant and then suddenly repel from the object taken with accelerated force. This reaction can be violent enough that the operator momentary loses control of the machine. A kickback can occur without warning when the cutter encounters an unseen obstacle when the blade is running. This is more likely in areas where it is difficult to properly check the material/area to be cut. For easy and safe cutting, cut the weeds/brush from right to your left.

1.10.9. If any trimmed materials get tangled in the nylon cord or cutting blade you MUST stop the machine and remove the HT lead. Onley then can you clear any blockages.
1.10.10. **DANGER**

NEVER use the machine with a saw blade attachment it is STRICTLY FORBIDDEN.

1.10.11. DO not use the brush cutter for trimming trees.

1.10.12. DO NOT wear rings and jewelry or loose, dangling clothing that could get caught in the machine. DO NOT wear footwear with unprotected toes and DO NOT work barefoot or without leg protection. In certain situations, you have to wear head protection.
2. QUICK START
You can also check out our online video at www.youtube.com/hyundaipowerequip.co.uk

2.1. This guide is meant to serve as a quick reference for operating your Hyundai brush cutter it is for convenience and the user should read the safety section first.

OUTDOOR USE ONLY.

This brush-cutter produces carbon monoxide - a poisonous, colourless & odourless gas that can cause death or serious injury. Petrol is highly flammable, always handle with extreme care and in a well ventilated area.

Always remove HT lead from spark plug when checking machine or changing parts.

2.2. This product includes, Main unit, Operators handle, Trimmer head, Bump feed nylon trimmer head, 3 tooth steel blade, 8 tooth steel blade, Spare 2.5 mm nylon cord, Full harness, Gloves, Face shield, Ear defenders, Tool kit, Spare spark plug, 2-Stroke oil mixing bottle, User manual, Warranty registration form & Morris lubrication chart.

2.3. At this point, check that you have all of the included items listed above. If any are missing or damaged, call 01646 687 880 or email info@hyundaipowerequipment.co.uk.

2.4. Trigger and handlebar assembly.

**Undo the Screw from the trigger assembly and remove both the screw and retaining nut.**

---

**Trigger assembly**

---

Retaining nut  Screw
Slide the trigger assembly over the handle bar, locate the hole and refit the screw and bolt through the trigger assembly.

N.B. Note orientation of trigger assembly power switch should be towards user.
Undo the 4 Allen bolts and remove the cover, place handle bar into cradle and align hole in shaft and refit the four Allen bolts once positioned to suit user tighten the bolts.
2.5. Trimmer blade assembly.

Before fitting the trimmer guard to the machine you must first fit the trimmer guard cord cutter. Take the cutter blade and 3 self-tapping screws from the Blue tool bag. Align the cutter blade as shown and fix into place. N.B. Keep the protective sleeve in place until blade is fully secured and ready for use.

2.6. Trimmer guard assembly.

The trimmer guard needs to be fixed onto the lower shaft before it is mounted onto the machine. Take the trimmer guard clamp and 2 fixing Allen bolts from the tool bag then attach them to the trimmer guard. At this stage DO NOT overtighten the bolts.
Place the semi assembled trimmer guard and slide it over the shaft as shown below. You will need to rubber bung of the end of the lower shaft – retain the bung for future use as it helps to keep the drive shaft clear and free of debris. Once the guard clamp has been located into the hole of the shaft tighten the two fixing bolts.
2.7. Grass trimmer assembly.

To fit the trimmer head you need to undo the retaining nut (clockwise direction), then remove the retention cup and the clamp plate (Keep these safe they are not used with the trimmer head).

Using one of the supplied 4mm Allen keys lock the shaft, then screw on the trimmer head in anti-clockwise direction make sure head is fully tightened.

Remove the Allen key before use.
To remove head reverse the process.
2.8. Cutter head assembly. (Machine is supplied with a 3 and 8 toothed blade).

2.8.1. You should wear safety gloves when handling the blades.

To fit the cutter blade you will need to remove the trimmer head. Once the trimmer head is removed select either the 3 or 8 toothed blade. Remove the plastic blade protective guard (retain for future use) and mount onto the shaft. Fit drive spacer as below.

Correct

Incorrect

Drive spacer

Fit blade. Make sure blade is correctly slotted onto shaft.

Correct

Incorrect

Blade
Fit clamp spacer.

Correct

Incorrect

Clamp spacer

Fit cup spacer and securing nut. Lock the shaft as in section 2.7 and fully tighten. N.B. if machine vibrates excessively in use then STOP machine and make sure that the blades is correctly fitted – if in doubt contact Hyundai aftersales department.

Correct

Incorrect

Correct

Retention cup

Securing nut
To fully tighten use the supplied spark plug box spanner. N.B. To tighten you need to turn box spanner in an anti-clockwise direction.

2.9. Attaching cutting assembly to drive shaft.

To attach the cutter assembly remove the protection bung (retain for future use) – undo the locking hand wheel, press the locking trigger and insert the cutter assembly into the drive assembly until it locates with the shaft. Once located the locking trigger will drop into place, pull shaft in outward direction to make sure it has locked. Once this is done tighten the locking hand wheel.
2.10. Head shield/Ear defender assembly.

Rotate to align the tags on the helmet to match the holes on the top of the visor. Place the visor over the tags, then rotate the tags 180° to secure into place. Place the ear defenders over the outside of the headband on the helmet and place into the clips.

2.11. Mixing 2 stroke oil.

Fill the mixing bottle with fresh unleaded petrol to the fuel marker line use a 40:1 ratio. Then top up with 2 stroke oil to 40:1 ratio line shake until fuel/oil has mixed.

Unscrew the fuel tank cap and carefully add a 2-stroke fuel/oil mixture as in section 2.10. DO NOT overfill and allow a 25 mm gap at the top of the tank. Once full replace and correctly tighten the fuel cap. Fuel tank capacity is 1200ml.

DO NOT use straight unleaded petrol.

2.13. Fitting replacing spool line.

Squeeze the bump head unit either side on the grooves and pull to remove the top of the head. Remove the spool, spring and washer from the spindle.
With the bump feed facing outwards from your left hand, take the looped end and place it around the holder in the middle of the spool as shown below.

You will need approximately 3 metres of 2.5 mm of nylon cord the bump head unit either side on the grooves and pull to remove the top of the head. Remove the spool, spring and washer from the spindle.

Take cutting line and fold in half

Place the looped end over the spool
Wrap the nylon cord around the spool in an anti-clockwise direction until you have approximately - 150 mm (6”). Then insert spool back into the spindle. Feed the line through the two notches in the spindle and reinsert the washer and spring into the spool. Once complete re-attach the spindle to the cutting head.

Wrap the nylon cord around the spool in an anti-clockwise direction until you have approximately - 150 mm (6”).

Then insert spool back into the spindle. Feed the line through the two notches in the spindle.

Reinsert the washer and spring into the spool. Once complete re-attach the spindle to the cutting head.
3. **STARTING PROCEDURE**

Fill with fuel/oil mixture, make sure the fuel cap is secure – see section 2.11. - Set the power switch on the handle to the ON position.

Pump the primer bulb about 8 to 10 times until fuel shows in the bulb.
For COLD start move choke lever UP to start position. N.B. For a WARM/HOT start you will probably not need to do this.

Place one hand on the machine, and using the other hand pull the recoil until you feel a resistance, then pull briskly. Repeat until machine starts. When the engine starts move the choke to the OFF position. DO NOT let go of the recoil handle instead allow the recoil cord to return gently. Once started you need to reduce the choke by slowly moving lever to RUN position if engine falters move choke between START/RUN positions and adjust until engine runs smoothly.
**Before starting work allow the engine to warm up. Once the engine has warmed up (2/3 minutes) you can apply the throttle. Press both the throttle lock and throttle lever together. To adjust the amount of throttle partiality release the throttle lever only.**

The throttle trigger can be locked into place by pressing the trigger lock button. To release the trigger lock press and release the throttle trigger.

---

**4. STOPPING PROCEDURE**

4.1. Before stopping the machine allow the engine to cool down for a few minutes, by allowing it to run without throttle.

4.2. You MUST allow the cutting head to come to a full stop before carrying out any maintenance on the machine.

**To STOP the machine release the throttle lever, allow the machine to cool down with no throttle then move the power switch to the OFF position.**

If not already in OFF position move the choke to the OFF position.
5. USING THE MACHINE

**WARNING**
During use the engine and exhaust gets very HOT. You must keep all parts of the body and clothing clear. DO NOT leave a HOT machine near combustible materials.

5.1. Before starting work.
5.1.1. YOU MUST check the work area for obstacles such as stones, metal rods or other objects. If these cannot be removed, mark these positions, so you can avoid contact with the trimmer head and objects. Overhead power lines can be caught on the blade head if machine is swirled in the air.

5.2. Accessories.
5.2.1. Make sure that your product is only equipped with original accessories. Only use the machine with original parts which are specified by the manufacturer. The use of any other accessories may cause injury to the user and damage to the machine.

5.3. Wearing the shoulder harness.

**CAUTION**
When you use this machine always wear the provided harness. Make sure that the machine is securely hooked onto the strap. If you do not, you will not be able to control the machine safely. This may result in injury to yourself or other people. Never use a harness with any type of defect especially with a defective quick release mechanism.

a. Put the harness on.

b. Connect quick release buckle.

c. 1 = Protector Shield and machine hook. Attach machine to machine hook.

d. Adjust the harness to suit the user.

e. 1 = Quick release Harness buckle.
f. The shoulder strap is fitted with a quick release device (see image) fitted. You can remove the shoulder strap quickly by pulling the quick release device.

5.4. Trimming techniques.

⚠️ CAUTION ⚠️
If you are not familiar with the trimming, practice with the machine with the machine stopped.

5.4.1. Always trim or cut with the engine running at high speed.
5.4.2. Do not run the machine slowly except for when warming up before use or cooling down after use.
5.4.3. Swing the nylon cutting head of the trimmer horizontally from left to right.

5.4.4. Keep cutting deck parallel with the ground. Do not tilt the nylon cutting or blade head during operation.
5.4.5. For correct cutting height trim a test area in advance.
5.4.6. Keep nylon cutting or blade head at the same level for an even depth of cut.
5.4.7. Nylon trimming head is only to be used for trimming grass.
5.4.8. Metal blade head is only to be used for cutting brush.
5.4.9. To prevent overheating NEVER over cut, instead cut off smaller lengths of grass or brush. You MUST also remove any tangled materials — You MUST stop the machine and remove the HT lead before carrying out this task.

5.4.10. When trimming around trees trim slowly making sure that the nylon cord does not come into contact with the trunk. Walk around the tree from left to right and approach grass with the tip of the cutting nylon cord.
5.4.11. To release more nylon cutting cord run the machine at full throttle and tap the nylon cutting head on the grass. The nylon cord is then released. Any excess cord is cut off by the trimmer blade mounted on the guard. When trimming near brick or stone walls the nylon cord will wear out quicker.
## 6. MAINTENANCE

---

**WARNING**

Always stop the engine and unplug the spark plug before doing any repairs or maintenance. Never touch the rotating nylon cord or blade.

Check and maintain fuel level regularly, and maintain the fuel/oil mix to the correct ratio. Frequent check the brush cutter and make sure that all grass deposits are removed from the trimmer head and/or blade.

Check the blade, in order to obtain a good cut, the blade should always be sharp and well balanced. At regular intervals, check the tightness of all nuts, bolts and screws.

If the blade hits an obstacle check for damage and if the machine vibrates badly stop the lawnmower and take it to a service dealer.

---

**CAUTION**

Always refuel in a well-ventilated area with the engine off.

Whilst carrying out maintenance you must wear appropriate Personal Protective Equipment (PPE). Suggested PPE Sturdy footwear, work gloves (especially when working near blade), long trousers and hearing protection.

---

a = Increase maintenance intervals if operating in dusty environments. b = All maintenance operations - except those listed in the operating instructions, must be performed by qualified service personnel.
6.1. **Air filter.**

⚠️ **CAUTION**

Never let the engine run without the air filter. A dirty air filter element affects the engine performance, increases fuel consumption and makes it difficult to start. If you notice a loss of engine power.

6.1.1. Remove the air filter cover by undoing the Allen bolt using the supplied Allen key.
6.1.2. Carefully remove the outer cover, then remove the inner cover.
6.1.3. Once the inner cover has been removed you can remove the foam air filter element. If it is damaged replace it. Otherwise wash the element in clean soapy water, rinse in fresh water and allow to fully air dry before replacing filter element.

N.B. To reinstate the filter assembly reverse the above process.
6.2. Spark plug.

**WARNING**

The spark plug MUST be fully tightened otherwise the engine will overheat causing damage. Always complete the following steps after the engine has been turned off and allowed to cool down.

6.2.1. To make sure the engine runs correctly a spark plug gap of 0.6 -0.7 mm must be maintained and the spark plug must be free of carbon deposits.

6.2.1. To remove the spark undo the cover then pull back the protective cover. Pull off the HT lead and then undo the spark plug using the supplied box spanner in an anti-clockwise direction.

6.2.3. Once the plug has been removed check it for visual damage, electrode wear and carbon deposits. Replace a damaged or badly worn spark plug. Clean off any carbon deposits by using a soft brass brush.

6.2.4. Check the gap with a feeler gauge and adjust electrode at the correct gap of 0.6 -0.7 mm.

6.2.5. Check the washer (replace as required) of the spark plug. Refit the spark plug by hand to make sure it does not cross thread, tighten the spark plug to a torque of 12/15Nm.

6.2.6. To refit spark plug reverse the above process.
6.3. Trimmer blade sharpening

**WARNING**

When sharpening the blade you MUST wear safety gloves.

6.3.1. Remove the cutting blade from the shield. Remove the blade by undoing the 3 self-tapping screws (put in a safe place). Place the blade firmly into a vice.

6.3.2. Sharpen blade using a suitable flat file. You MUST maintain the blades original cutting angle.

6.3.3. Reverse process to refit blade.

6.4. Storage.

**WARNING**

If you do not follow these steps, deposit may arise in the carburetor. This will cause starting difficulties and may cause permanent damage.

6.4.1. Perform all the general maintenance that the maintenance section of your ‘User Manual’ is recommended.

6.4.2. Clean the outside of the machine, drive axle, shield and nylon cutting head.

6.4.3. Remove all fuel from the fuel tank.

6.4.4. After all the fuel has been removed from the fuel tank. Start the engine. Allow the engine to run in idle until engine stops alone. This allows the fuel to be removed from the carburetor.

6.4.5. Allow the engine to cool down for about five minutes.

6.4.6. Remove the spark plug and pour 1 teaspoon of clean oil into the combustion chamber. Slowly pull the starter rope several times to coat internal components. Replace the spark plug.

6.4.7. Store the machine in a cool, dry place away from any source of ignition such as an oil burner, water heater etc.

6.5. Transporting the machine.

6.5.1. When transporting the machine make sure that no fuel is allowed to leak out.

6.5.2. DO NOT allow the trimmer/brush cutter come into contact with persons, animals and property.
### 7. TROUBLESHOOTING

**CAUTION**

7.1. If troubleshooting does not solve the problem, contact your dealer or the manufacturer directly. Use only original parts approved by the manufacturer, otherwise a hazard risk arises.

<table>

10. DECLARATIONS OF CONFORMITY

Genpower Ltd confirms that these Hyundai products conform to the following CE Directives;
2006/42/EC Machinery Directive
2004/108/EC EMC Directive
97/68/EC_2010/26/EC NRMM Emissions Directive

---

**EC DECLARATION OF CONFORMITY**

The undersigned, as authorised by: Genpower Ltd

Declares that the following equipment manufactured under licence by Hyundai Korea

Conforms to the Directive:

**2000/14/EC, Amended by 2005/88/EC (as amended)**

Equipment Category: Garden Machinery

Product Name/Model: HYBC5200

Type/Serial No: Brush-cutter/Grass trimmer

Power: 1.2 kW

Cutting Width: Blade 255mm, Trimmer cord 400-450 mm

The technical documentation is kept by: Kevin Stanley, Genpower Ltd,

Isaac Way, Pembroke Dock,
Pembrokeshire, SA72 4RW.

The conformity assessment procedure followed was in accordance with annex V of the Directive.

Notified Body: TÜV Rheinland LGA Products GmbH,
Tilleysstraße 2
D-90431,
NÜMBERG

Certificate Number/Test Report number 14714716 001

Measured Sound Power Level: 113dB(A)

Guaranteed Sound Power Level: 113dB(A)

A copy of this certificate has been submitted to the European Commission and to EU Member State United Kingdom.

Place of Declaration: Pembroke Dock, SA72 4RW

Date: 10th January 2016

Signed by: Kevin Stanley

Position in Company: Product Manager

Name and address of manufacturer or Authorised representative:
