User Manual

About this Manual

This Manual is applicable to Network Camera.
The Manual includes instructions for using and managing the product. Pictures, charts, images and all other information hereinafter are for description and explanation only.
The information contained in the Manual is subject to change, without notice, due to firmware updates or other reasons. Please find the latest version in the company website.

Please use this user manual under the guidance of professionals.

Legal Disclaimer

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND Firmware, IS PROVIDED “AS IS”, WITH ALL FAULTS AND ERRORS, AND OUR COMPANY MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF THIRD PARTY. IN NO EVENT WILL OUR COMPANY, ITS DIRECTORS, OFFICERS, EMPLOYEES, OR AGENTS BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA OR DOCUMENTATION, IN CONNECTION WITH THE USE OF THIS PRODUCT, EVEN IF OUR COMPANY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

REGARDING TO THE PRODUCT WITH INTERNET ACCESS, THE USE OF PRODUCT SHALL BE WHOLLY AT YOUR OWN RISKS. OUR COMPANY SHALL NOT TAKE ANY RESPONSIBILITES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER ATTACK, HACKER ATTACK, VIRUS INSPECTION, OR OTHER INTERNET
SECURITY RISKS; HOWEVER, OUR COMPANY WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.

SURVEILLANCE LAWS VARY BY JURISDICTION. PLEASE CHECK ALL RELEVANT LAWS IN YOUR JURISDICTION BEFORE USING THIS PRODUCT IN ORDER TO ENSURE THAT YOUR USE CONFORMS THE APPLICABLE LAW. OUR COMPANY SHALL NOT BE LIABLE IN THE EVENT THAT THIS PRODUCT IS USED WITH ILLEGITIMATE PURPOSES.

IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATER PREVAILS.

Regulatory Information

FCC Information

FCC compliance: This equipment has been tested and found to comply with the limits for a digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

FCC Conditions

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.

2. This device must accept any interference received, including interference that may cause undesired operation.

EU Conformity Statement

This product and - if applicable - the supplied accessories too are
marked with "CE" and comply therefore with the applicable harmonized European standards listed under the EMC Directive 2004/108/EC, the RoHS Directive 2011/65/EU.

2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info.

2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: www.recyclethis.info.

**Industry Canada ICES-003 Compliance**

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.

**Safety Instruction**

These instructions are intended to ensure that the user can use the product correctly to avoid danger or property loss.

The precaution measure is divided into ‘Warnings’ and ‘Cautions’:

**Warnings**: Serious injury or death may be caused if any of these warnings are neglected.

**Cautions**: Injury or equipment damage may be caused if any of these cautions are neglected.
**Warnings**: Follow these safeguards to prevent serious injury or death.

- Please adopt the power adapter which can meet the safety extra low voltage (SELV) standard. And source with 12 VDC or 24 VAC (depending on models) according to the IEC60950-1 and Limited Power Source standard.
- To reduce the risk of fire or electrical shock, do not expose this product to rain or moisture.
- This installation should be made by a qualified service person and should conform to all the local codes.
- Please install blackouts equipment into the power supply circuit for convenient supply interruption.
- Please make sure that the ceiling can support more than 50(N) Newton gravities if the camera is fixed to the ceiling.
- If the product does not work properly, please contact your dealer or the nearest service center. Never attempt to disassemble the camera yourself. (We shall not assume any responsibility for problems caused by unauthorized repair or maintenance.)

**Cautions**: Follow these precautions to prevent potential injury or material damage.

- Make sure the power supply voltage is correct before using the camera.
- Do not drop the camera or subject it to physical shock.
- Do not touch sensor modules with fingers. If cleaning is necessary, use a clean cloth with a bit of ethanol and wipe it gently. If the camera will not be used for an extended period of time, put on the lens cap to protect the sensor from dirt.
• Do not aim the camera lens at the strong light such as sun or incandescent lamp. The strong light can cause fatal damage to the camera.

• The sensor may be burned out by a laser beam, so when any laser equipment is being used, make sure that the surface of the sensor not be exposed to the laser beam.

• Do not place the camera in extremely hot, cold temperatures (the operating temperature should be between -30°C to +60°C, or -40°C to +60°C if the camera model has an “H” in its suffix), dusty or damp environment, and do not expose it to high electromagnetic radiation.

• To avoid heat accumulation, ensure there is good ventilation to the device.

• Keep the camera away from water and any liquids.

• While shipping, pack the camera in its original, or equivalent, packing materials. Or packing the same texture.

• Improper use or replacement of the battery may result in hazard of explosion. Please use the manufacturer recommended battery type.

Notes:
For the camera supports IR, you are required to pay attention to the following precautions to prevent IR reflection:

• Dust or grease on the dome cover will cause IR reflection. Please do not remove the dome cover film until the installation is finished. If there is dust or grease on the dome cover, clean the dome cover with clean soft cloth and isopropyl alcohol.

• Make certain the installation location does not have reflective surfaces of objects too close to the camera. The IR light from the camera may reflect back into the lens causing reflection.

• The foam ring around the lens must be seated flush against the inner surface of the bubble to isolate the lens from the IR LEDs. Fasten the dome cover to camera body so that the foam ring and the dome cover are attached seamlessly.

Chapter 1  System Requirement

**Operating System**: Microsoft Windows XP SP1 and above version

**CPU**: 2.0 GHz or higher

**RAM**: 1G or higher

**Display**: 1024×768 resolution or higher

**Web Browser**: Internet Explorer 8.0 and above version, Apple Safari 5.0.2 and above version, Mozilla Firefox 5.0 and above version and Google Chrome 18 and above version.
Chapter 2  Network Connection

**Note:**
- You shall acknowledge that the use of the product with Internet access might be under network security risks. For avoidance of any network attacks and information leakage, please strengthen your own protection. If the product does not work properly, please contact with your dealer or the nearest service center.
- To ensure the network security of the network camera, we recommend you to have the network camera assessed and maintained termly. You can contact us if you need such service.

**Before you start:**
- If you want to set the network camera via a LAN (Local Area Network), please refer to Section 2.1 *Setting the Network Camera over the LAN*.
- If you want to set the network camera via a WAN (Wide Area Network), please refer to Section 2.2 *Setting the Network Camera over the WAN*.

### 2.1 Setting the Network Camera over the LAN

**Purpose:**
To view and configure the camera via a LAN, you need to connect the network camera in the same subnet with your computer, and install the SADP or iVMS-4200 software to search and change the IP of the network camera.

**Note:** For the detailed introduction of SADP, please refer to Appendix 1.

#### 2.1.1 Wiring over the LAN

The following figures show the two ways of cable connection of a network camera and a computer:

**Purpose:**
- To test the network camera, you can directly connect the network camera to the computer with a network cable as shown in Figure 2-1.
Refer to the Figure 2-2 to set network camera over the LAN via a switch or a router.

Figure 2-1 connecting Directly

Figure 2-2 Connecting via a Switch or a Router

2.1.2 Activating the Camera

You are required to activate the camera first by setting a strong password for it before you can use the camera.

Activation via SADP, and Activation via Client Software are all supported.

Activation via SADP Software

SADP software is used for detecting the online device, activating the camera, and resetting the password.

Get the SADP software from the supplied disk or the official website, and install the SADP according to the prompts. Follow the steps to activate the camera.

Steps:

1. Run the SADP software to search the online devices.
2. Check the device status from the device list, and select the inactive device.
3. Create a password and input the password in the password field, and confirm the password.

**STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

4. Click **OK** to save the password.

You can check whether the activation is completed on the pop up window. If activation failed, please make sure that the password meets the requirement and try again.

5. Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the checkbox of **Enable DHCP**.
6. Input the password and click the **Save** button to activate your IP address modification.

- **Activation via Client Software**

The client software is versatile video management software for multiple kinds of devices.

Get the client software from the supplied disk or the official website, and install the software according to the prompts. Follow the steps to activate the camera.

**Steps:**

1. Run the client software and the control panel of the software pops up, as shown in the figure below.
2. Click the **Device Management** icon to enter the Device Management interface, as shown in the figure below.

3. Check the device status from the device list, and select an inactive device.
4. Click the **Activate** button to pop up the Activation interface.

5. Create a password and input the password in the password field, and confirm the password.

   **STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. We recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

   ![Figure 2-7 Activation Interface (Client Software)](image)

6. Click **OK** button to start activation.

7. Click the Modify Netinfo button to pop up the Network Parameter Modification interface, as shown in the figure below.
8. Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the checkbox of Enable DHCP.

9. Input the password to activate your IP address modification.

### 2.2 Setting the Network Camera over the WAN

**Purpose:**

This section explains how to connect the network camera to the WAN with a static IP or a dynamic IP.

#### 2.2.1 Static IP Connection

**Before you start:**

Please apply a static IP from an ISP (Internet Service Provider). With the static IP address, you can connect the network camera via a router or connect it to the WAN directly.

- **Connecting the network camera via a router**

**Steps:**
1. Connect the network camera to the router.

2. Assign a LAN IP address, the subnet mask and the gateway.

3. Save the static IP in the router.

4. Set port mapping, e.g., 80, 8000, and 554 ports. The steps for port mapping vary according to the different routers. Please call the router manufacturer for assistance with port mapping.

**Note:** Refer to Appendix 2 for detailed information about port mapping.

5. Visit the network camera through a web browser or the client software over the internet.

---

**2.2.2 Dynamic IP Connection**

**Before you start:**

Please apply a dynamic IP from an ISP. With the dynamic IP address, you can connect the network camera to a modem or a router.

- **Connecting the network camera via a router**

**Steps:**

1. Connect the network camera to the router.
2. In the camera, assign a LAN IP address, the subnet mask and the gateway. Refer to Section 2.1.2 for detailed IP address configuration of the network camera.

3. In the router, set the PPPoE user name, password and confirm the password.

4. Set port mapping. E.g. 80, 8000, and 554 ports. The steps for port mapping vary depending on different routers. Please call the router manufacturer for assistance with port mapping.

*Note:* Refer to Appendix 2 for detailed information about port mapping.

5. Apply a domain name from a domain name provider.

6. Configure the DDNS settings in the setting interface of the router.

7. Visit the camera via the applied domain name.

- **Connecting the network camera via a modem**

  **Purpose:**

  This camera supports the PPPoE auto dial-up function. The camera gets a public IP address by ADSL dial-up after the camera is connected to a modem. You need to configure the PPPoE parameters of the network camera.

  ![Diagram](image)

  Figure 2-11 Accessing the Camera with Dynamic IP

  *Note:* The obtained IP address is dynamically assigned via PPPoE, so the IP address always changes after rebooting the camera. To solve the inconvenience of the dynamic IP, you need to get a domain name from the DDNS provider (E.g. DynDns.com). Please follow the steps below for normal domain name resolution and private domain name resolution to solve the problem.

  ✦ **Normal Domain Name Resolution**
Steps:

1. Apply a domain name from a domain name provider.
2. Configure the DDNS settings in the **DDNS Settings** interface of the network camera.
3. Visit the camera via the applied domain name.

♦ Private Domain Name Resolution

Steps:

1. Install and run the IP Server software in a computer with a static IP.
2. Access the network camera through the LAN with a web browser or the client software.
3. Enable DDNS and select IP Server as the protocol type.
Chapter 3  Access to the Network Camera

3.1 Accessing by Web Browsers

Steps:

1. Run the SADP software to search the online devices.
2. Double click IPv4 Address to open the browser.
3. Activate the network camera for the first time using
4. Select language as the interface language on the top-right of login interface.
5. Input the user name and password and click Login.

The admin user should configure the device accounts and user/operator permissions properly. Delete the unnecessary accounts and user/operator permissions.

Note:

The IP address gets locked if the admin user performs 7 failed password attempts
(5 attempts for the user/operator).

![Login Interface](image)

**Figure 3-2 Login Interface**

6. Install the plug-in before viewing the live video and operating the camera. Please follow the installation prompts to install the plug-in.

![Download and Install Plug-in](image)

**Figure 3-3 Download and Install Plug-in**

*Note:* You may have to close the web browser to install the plug-in. Please reopen the web browser and log in again after installing the plug-in.

### 3.2 Accessing by Client Software

The product CD contains the iVMS-4200 client software. You can view the live video and manage the camera with the software. Follow the installation prompts to install the software. The control panel and live view interface of iVMS-4200 client software are shown as below.
Figure 3-4 iVMS-4200 Control Panel

Figure 3-5 iVMS-4200 Main View
Chapter 4  Wi-Fi Settings

Purpose:
By connecting to the wireless network, you don’t need to use cable of any kind for network connection, which is very convenient for the actual surveillance application.

Note: This chapter is only applicable for the cameras with the built-in Wi-Fi module.

4.1 Configuring Wi-Fi Connection in Manage and Ad-hoc Modes

Purpose:
Two connection modes are supported. Choose a mode as desired and perform the steps to configure the Wi-Fi.

4.1.1 Wireless Connection in Manage Mode

Steps:
1. Enter the Wi-Fi configuration interface.
   
   Configuration > Network > Advanced Settings > Wi-Fi

2. Click Search to search the online wireless connections.

3. Click to choose a wireless connection on the list.
4. Check the radio button to select the *Network mode* as *Manage*, and the *Security mode* of the network is automatically shown when you select the wireless network, please don’t change it manually.

*Note:* These parameters are exactly identical with those of the router.

5. Enter the key to connect the wireless network. The key should be that of the wireless network connection you set on the router.

### 4.1.2 Wireless Connection in Ad-hoc Mode

If you choose the Ad-hoc mode, you don’t need to connect the wireless camera via a router. The scenario is the same as you connect the camera and the PC directly with a network cable.

**Steps:**

1. Choose Ad-hoc mode.

2. Customize a SSID for the camera.
4. Enable the wireless connection function for your PC.
5. On the PC side, search the network and you can see the SSID of the camera listed.

![Ad-hoc Connection Point](image)

Figure 4-4 Ad-hoc Connection Point

6. Choose the SSID and connect.

**Security Mode Description:**

![Security Mode](image)

Figure 4-5 Security Mode

You can choose the Security Mode as not-encrypted, WEP, WPA-personal, WPA-enterprise, WPA2-personal, and WPA2-enterprise.

**WEP mode:**

![WEP Mode](image)

Figure 4-6 WEP Mode
- Authentication - Select Open or Shared Key System Authentication, depending on the method used by your access point. Not all access points have this option, in which case they probably use Open System, which is sometimes known as SSID Authentication.

- Key length - This sets the length of the key used for the wireless encryption, 64 or 128 bit. The encryption key length can sometimes be shown as 40/64 and 104/128.

- Key type - The key types available depend on the access point being used. The following options are available:
  - HEX - Allows you to manually enter the hex key.
  - ASCII - In this method the string must be exactly 5 characters for 64-bit WEP and 13 characters for 128-bit WEP.

**WPA-personal and WPA2-personal Mode:**

Enter the required Pre-shared Key for the access point, which can be a hexadecimal number or a passphrase.

![Security Mode - WPA-personal](image)

**WPA- enterprise and WPA2-enterprise Mode:**

Choose the type of client/server authentication being used by the access point; EAP-TLS or EAP-PEAP.

- EAP-TLS
<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Figure 4-8 EAP-TLS

- Identity - Enter the user ID to present to the network.
- Private key password – Enter the password for your user ID.
- EAPOL version - Select the version used (1 or 2) in your access point.
- CA Certificates - Upload a CA certificate to present to the access point for authentication.

**EAP-PEAP:**

- User Name - Enter the user name to present to the network
- Password - Enter the password of the network
- PEAP Version - Select the PEAP version used at the access point.
- Label - Select the label used by the access point.
- EAPOL version - Select version (1 or 2) depending on the version used at the access point
- CA Certificates - Upload a CA certificate to present to the access point for authentication

⚠️ For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to
increase the security of your product.

- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

4.2 Easy Wi-Fi Connection with WPS function

Purpose:
The setting of the wireless network connection is never easy. To avoid the complex setting of the wireless connection you can enable the WPS function.

WPS (Wi-Fi Protected Setup) refers to the easy configuration of the encrypted connection between the device and the wireless router. The WPS makes it easy to add new devices to an existing network without entering long passphrases. There are two modes of the WPS connection, the PBC mode and the PIN mode.

Note: If you enable the WPS function, you do not need to configure the parameters such as the encryption type and you don’t need to know the key of the wireless connection.

Steps:

<table>
<thead>
<tr>
<th>WPS</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Enable WPS</td>
</tr>
<tr>
<td>PIN Code</td>
</tr>
<tr>
<td>[ ] PBC connection</td>
</tr>
<tr>
<td>[ ] Use router PIN code</td>
</tr>
<tr>
<td>SSID</td>
</tr>
<tr>
<td>Router PIN code</td>
</tr>
</tbody>
</table>

Figure 4-9 Wi-Fi Settings - WPS

PBC Mode:
PBC refers to the Push-Button-Configuration, in which the user simply has to push a button, either an actual or virtual one (as the button on the configuration interface of the IE browser), on both the Access Point (and a registrar of the network) and the new wireless client device.
1. Check the checkbox of **Enable WPS** to enable WPS.
2. Choose the connection mode as PBC.

![PBC connection](Connect)

**Note:** Support of this mode is mandatory for both the Access Points and the connecting devices.

3. Check on the Wi-Fi router to see if there is a WPS button. If yes push the button and you can see the indicator near the button start flashing, which means the WPS function of the router is enabled. For detailed operation, please see the user guide of the router.

4. Push the WPS button to enable the function on the camera.

If there is not a WPS button on the camera, you can also click the virtual button to enable the PBC function on the web interface.

5. Click **Connect** button.

When the PBC mode is both enabled in the router and the camera, the camera and the wireless network is connected automatically.

**PIN Mode:**

The PIN mode requires a Personal Identification Number (PIN) to be read from either a sticker or the display on the new wireless device. This PIN must then be entered to connect the network, usually the Access Point of the network.

**Steps:**

1. Choose a wireless connection on the list and the SSID is loaded automatically.
2. Choose **Use router PIN code**.

<table>
<thead>
<tr>
<th>WPS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Enable WPS</strong></td>
</tr>
<tr>
<td>PIN Code 12345678</td>
</tr>
<tr>

</tr>
<tr>
<td>Use router PIN code</td>
</tr>
<tr>
<td>SSID ANNKE007</td>
</tr>
<tr>
<td>Router PIN code</td>
</tr>
</tbody>
</table>

Figure 4-10 Use PIN Code
If the PIN code is generated from the router side, you should enter the PIN code you get from the router side in the **Router PIN code** field.

3. Click **Connect**.

Or

You can generate the PIN code on the camera side. And the expired time for the PIN code is 120 seconds.

1. Click **Generate**.

2. Enter the code to the router, in the example, enter 48167581 to the router.

### 4.3 IP Property Settings for Wireless Network Connection

The default IP address of wireless network interface controller is 192.168.1.64. When you connect the wireless network you can change the default IP.

**Steps:**

1. Enter the TCP/IP configuration interface.
   
   Configuration> Network> Basic Settings > TCP/IP

2. Select the Wlan tab.
3. Customize the IPv4 address, the IPv4 Subnetwork Mask and the Default Gateway. The setting procedure is the same with that of LAN.

If you want to be assigned the IP address you can check the checkbox to enable the DHCP.
Chapter 5  Live View

5.1  Live View Page

*Purpose:*

The live view page allows you to view the real-time video, capture images, realize PTZ control, set/call presets and configure video parameters.

Log in the network camera to enter the live view page, or you can click **Live View** on the menu bar of the main page to enter the live view page.

**Descriptions of the live view page:**

![Live View Page](image)

**Figure 5-1 Live View Page**

**Menu Bar:**

Click each tab to enter Live View, Playback, Picture, Application, and Configuration page respectively.

**Live View Window:**

Display the live video.

**Toolbar:**
Toolbar allows you to adjust the live view window size, the stream type, and the plug-ins. It also allows you to process the operations on the live view page, e.g., start/stop live view, capture, record, audio on/off, two-way audio, start/stop digital zoom, etc.

For IE (Internet Explorer) users, plug-ins as webcomponents and quick time are selectable. And for Non-IE users, webcomponents, quick time, VLC or MJPEG is selectable if they are supported by the web browser.

PTZ Control:
Perform panning, tilting and zooming actions of the camera. Control the light and the wiper. (only available for cameras supporting PTZ function)

Preset/Patrol Settings:
Set/call/delete the presets or patrols for PTZ cameras.

**5.2 Starting Live View**

In the live view window as shown in Figure 5-2, click on the toolbar to start the live view of the camera.

![Live View Toolbar](image)

</table>
### 5.3 Recording and Capturing Pictures Manually

In the live view interface, click 📸 on the toolbar to capture the live pictures or click 🎥 to record the live view. The saving paths of the captured pictures and clips can be set on the **Configuration > Local** page. To configure remote scheduled recording, **Note**: The captured image will be saved as JPEG file or BMP file in your computer.

### 5.4 Operating PTZ Control

**Purpose:**

In the live view interface, you can use the PTZ control buttons to realize pan/tilt/zoom control of the camera.

**Note**: To realize PTZ control, the camera connected to the network must support the PTZ function or have a pan/tilt unit installed to the camera.

**PTZ Control Panel**

On the live view page, click 👉 next to the right side of the live view window to show the PTZ control panel and click 👈 to hide it.

Click the direction buttons to control the pan/tilt movements.

<table>

<td>Start/Stop 3D Zoom</td>
</tr>
</tbody>
</table>

**Note**: The icons vary according to the different camera models.
Click the zoom/focus/iris buttons to realize lens control.

**Notes:**

- There are eight direction arrows (⌜, ⌝, ⌈, ⌋, ⌈, ⌒, ⌜, ⌦) in the control panel. Click the arrows to realize adjustment in the relative positions.
- For the cameras which support lens movements only, the direction buttons are invalid.

</tbody>
</table>

**Setting/Calling a Preset**

- **Setting a Preset:**
  1. In the PTZ control panel, select a preset number from the preset list.
2. Use the PTZ control buttons to move the lens to the desired position.
   • Pan the camera to the right or left.
   • Tilt the camera up or down.
   • Zoom in or out.
   • Refocus the lens.

3. Click 🗝️ to finish the setting of the current preset.

4. You can click ✗️ to delete the preset.

   **Calling a Preset:**

   This feature enables the camera to point to a specified preset scene manually or when an event takes place.

   For the defined preset, you can call it at any time to the desired preset scene.

   In the PTZ control panel, select a defined preset from the list and click 🗝️ to call the preset.

   Or you can place the mouse on the presets interface, and call the preset by typing the preset No. to call the corresponding presets.
Chapter 6  Network Camera

Configuration

6.1 Configuring Local Parameters

Purpose:
The local configuration refers to the parameters of the live view, record files and captured pictures. The record files and captured pictures are the ones you record and capture using the web browser and thus the saving paths of them are on the PC running the browser.

Steps:
1. Enter the Local Configuration interface: **Configuration > Local Configuration.**

   ![Local Configuration Interface]

2. Configure the following settings:

   - **Live View Parameters:** Set the protocol type and live view performance.

   ![Live View Parameters]

   ![Record File Settings]

   ![Picture and Clip Settings]

38
Protocol Type: TCP, UDP, MULTICAST and HTTP are selectable.

TCP: Ensures complete delivery of streaming data and better video quality, yet the real-time transmission will be affected.

UDP: Provides real-time audio and video streams.

HTTP: Allows the same quality as of TCP without setting specific ports for streaming under some network environments.

MULTICAST: It's recommended to select MCAST type when using the Multicast function. For detailed information about Multicast, refer to Section 7.1.1 Configuring TCP/IP Settings.

Play Performance: Set the play performance to Shortest Delay or Auto.

Rules: It refers to the rules on your local browser, select enable or disable to display or not display the colored marks when the motion detection, face detection, or intrusion detection is triggered. E.g., enabled as the rules are, and the face detection is enabled as well, when a face is detected, it will be marked with a green rectangle on the live view.

Image Format: Choose the image format for picture capture.

Record File Settings: Set the saving path of the recorded video files. Valid for the record files you recorded with the web browser.

Record File Size: Select the packed size of the manually recorded and downloaded video files to 256M, 512M or 1G. After the selection, the maximum record file size is the value you selected.

Save record files to: Set the saving path for the manually recorded video files.

Save downloaded files to: Set the saving path for the downloaded video files in playback mode.

Picture and Clip Settings: Set the saving paths of the captured pictures and clipped video files. Valid for the pictures you capture with the web browser.

Save snapshots in live view to: Set the saving path of the manually captured pictures in live view mode.

Save snapshots when playback to: Set the saving path of the captured pictures in playback mode.
Save clips to: Set the saving path of the clipped video files in playback mode.

Note: You can click Browse to change the directory for saving the clips and pictures, and click Open to open the set folder of clips and picture saving.

3. Click Save to save the settings.

6.2 Configure System Settings

Purpose:
Follow the instructions below to configure the system settings, include System Settings, Maintenance, Security, and User Management, etc.

6.2.1 Configuring Basic Information

Enter the Device Information interface: Configuration > Advanced Configuration > System > Basic Information.

In the Basic Information interface, you can edit the Device Name and Device No..

Other information of the network camera, such as Model, Serial No., Firmware Version, Encoding Version, Number of Channels, Number of HDDs, Number of Alarm Input and Number of Alarm Output are displayed. The information cannot be changed in this menu. It is the reference for maintenance or modification in future.

Figure 6-2 Basic Information
6.2.1 Configuring Time Settings

**Purpose:**
You can follow the instructions in this section to configure the time synchronization and DST settings.

**Steps:**
Enter the Time Settings interface, **Configuration > Advanced Configuration > System > Time Settings.**

![Figure 6-3 Time Settings](image)

1. Select the Time Zone of your location from the drop-down menu.
2. Configure the NTP settings.
   (1) Click to enable the NTP function.
   (2) Configure the following settings:
      - **Server Address:** IP address of NTP server.
      - **NTP Port:** Port of NTP server.
      - **Interval:** The time interval between the two synchronizing actions with NTP server.
   (3) (Optional) You can click the Test button to test the time synchronization function via NTP server.
Figure 6-4 Time Sync by NTP Server

*Note:* If the camera is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the camera is set in a customized network, NTP software can be used to establish a NTP server for time synchronization.

- Configure the manual time synchronization.
  1. Check the **Manual Time Sync.** item to enable the manual time synchronization function.
  2. Click the icon to select the date, time from the pop-up calendar.
  3. (Optional) You can check **Sync. with computer time** item to synchronize the time of the device with that of the local PC.

Figure 6-5 Time Sync Manually

- Click **Save** to save the settings.

### 6.2.2 Configuring Maintenance

*Purpose:*
The maintenance interface allows you to process the operations, including reboot, default, export/import the configuration files, and remote upgrade the device.

Enter the Maintenance interface:

**Configuration > Advanced Configuration > System > Maintenance**

![Figure 6-6 Maintenance](image)

- **Reboot**: Restart the device.
- **Restore**: Reset all the parameters, except the IP parameters and user information, to the default settings.
- **Default**: Restore all the parameters to the factory default.
  
  **Note**: After restoring the default settings, the IP address is also restored to the default IP address, please be careful for this action.

- **Export/Import Config. File**: Configuration file is used for the batch configuration of the camera, which can simplify the configuration steps when there are a lot of cameras needing configuring.

  **Steps**:

  1. Click **Device Parameters** to export the current configuration file, and save it
to certain place.

2. Click Browse to select the saved configuration file and then click Import to start importing configuration file.

*Note:* You need to reboot the camera after importing configuration file.

- **Remote Upgrade:** Upgrade the device to a certain version.

  **Steps:**
  1. Select firmware or firmware directory to locate the upgrade file.
     - Firmware: Locate the exact path of the upgrade file.
     - Firmware Directory: Only the directory the upgrade file belongs to is required.
  2. Click Browse to select the local upgrade file and then click Upgrade to start remote upgrade.

  *Note:* The upgrading process will take 1 to 10 minutes. Please don't disconnect power of the camera during the process, and the camera reboots automatically after upgrade.

### 6.2.3 Configuring RS232 Settings

The RS232 port can be used in two ways:

- **Parameters Configuration:** Connect a computer to the camera through the serial port. Device parameters can be configured by using software such as HyperTerminal. The serial port parameters must be the same as the serial port parameters of the camera.

- **Transparent Channel:** Connect a serial device directly to the camera. The serial device will be controlled remotely by the computer through the network.

  **Steps:**
2. Configure the Baud Rate, Data Bit, Stop Bit, Parity, Flow Control, and Usage.

![RS232 Settings](image)

**Figure 6-7 RS232 Settings**

*Note:* If you want to connect the camera by the RS232 port, the parameters of the RS232 should be exactly the same with the parameters you configured here.

3. Click **Save** to save the settings.

### 6.2.4 Configuring DST Settings

**Purpose:**

Daylight Saving Time (DST) is a way of making better use of the natural daylight by setting your clock forward one hour during the summer months, and back again in the fall.

Configure the DST according to your actual demand.

**Steps:**

1. Enter the DST configuration interface.

   **Configuration > Advanced Configuration > System > DST**
Figure 6-8 DST Settings

2. Select the start time and the end time.
3. Select the DST Bias.
4. Click **Save** to activate the settings.

### 6.2.5 Configuring Service

*Purpose:*
For the device Service, including the IR light and status LED, you can control them via the Web browser. Service vary according to the different camera models.

*Steps:*
1. Enter the External Device configuration interface.

   **Configuration > Advanced Configuration > System > Service**

   ![Service Settings](image)

   **Figure 6-9 Service Settings**

   2. Check the Enable IR Light checkbox to enable the IR Light.
   3. Check the Enable Status LED checkbox to enable the Status LED.
   4. Click Save to save the settings.
Chapter 7  Network Settings

Purpose:
You can configure the parameters, including TCP/IP, Port, DDNS, PPPoE, SNMP, QoS, FTP, Wi-Fi, Email, NAT, Platform Access, HTTPS etc., by following the instructions in this section.

7.1 Configuring TCP/IP Settings

Purpose:
TCP/IP settings must be properly configured before you operate the camera over network. The camera supports both the IPv4 and IPv6. Both versions can be configured simultaneously without conflicting to each other, and at least one IP version should be configured.

Steps:
1. Enter TCP/IP Settings interface: Configuration > Advance Configuration > Network > TCP/IP

![Figure 7-1 TCP/IP Settings](image-url)
2. Configure the basic network settings, including the NIC Type, IPv4 or IPv6 Address, IPv4 or IPv6 Subnet Mask, IPv4 or IPv6 Default Gateway, MTU settings and Multicast Address.

3. (Optional) Check the checkbox of **Enable Multicast Discovery**, and then the online network camera can be automatically detected by client software via private multicast protocol in the LAN.

4. Configure the DNS server. Input the preferred DNS server, and alternate DNS server.

5. Click **Save** to save the above settings.

**Notes:**
- The valid value range of MTU is 1280 to 1500.
- The Multicast sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Before utilizing this function, you have to enable the Multicast function of your router.
- A reboot is required for the settings to take effect.

### 7.2 Configuring Port Settings

**Purpose:**
You can set the port No. of the camera, e.g., HTTP port, RTSP port and HTTPS port, Server port.

**Steps:**
1. Enter the Port Settings interface, **Configuration > Advance Configuration > Network > Port**
2. Set the HTTP port, RTSP port, HTTPS port and server port of the camera.

   - **HTTP Port**: The default port number is 80, and it can be changed to any port number which is not occupied.
   - **RTSP Port**: The default port number is 554 and it can be changed to any port number ranging from 1 to 65535.
   - **HTTPS Port**: The default port number is 443, and it can be changed to any port number which is not occupied.
   - **Server Port**: The default server port number is 8000, and it can be changed to any port number ranging from 2000 to 65535.

3. Click **Save** to save the settings.

   **Note**: A reboot is required for the settings to take effect.

### 7.3 Configuring DDNS Settings

**Purpose:**
If your camera is set to use PPPoE as its default network connection, you can use the Dynamic DNS (DDNS) for network access.

**Before you start:**
Registration on the DDNS server is required before configuring the DDNS settings of the camera.

**Steps:**
1. Enter the DDNS Settings interface: **Configuration > Advance Configuration > Network > DDNS**.

2. Check the **Enable DDNS** checkbox to enable this feature.

3. Select **DDNS Type**. Four DDNS types are selectable: HiDDNS, IPServer, DynDNS and NO-IP.
   - **DynDNS**:
     
     **Steps**:
     
     (1) Enter **Server Address** of DynDNS (e.g. members.dyndns.org).
     
     (2) In the **Domain** text field, enter the domain name obtained from the DynDNS website.
     
     (3) Enter the **User Name** and **Password** registered on the DynDNS website.
     
     (4) Click **Save** to save the settings.

   ![Figure 7-3 DynDNS Settings](image)

   - **IP Server**:
     
     **Steps**:
     
     (1) Enter the Server Address of the IP Server.
     
     (2) Click **Save** to save the settings.
**Note:**

- For the IP Server, you have to apply a static IP, subnet mask, and gateway and preferred DNS from the ISP. The **Server Address** should be entered with the static IP address of the computer that runs the IP Server software.
- For the US and Canada area, you can enter 173.200.91.74 as the server address.
- **NO-IP:**

**Steps:**

1. Choose the DDNS Type as NO-IP.

2. Enter the Server Address as [www.noip.com](http://www.noip.com)
(3) Enter the Domain name you registered.

(4) Enter the User Name and Password.

(5) Click **Save** and then you can view the camera with the domain name.

- **HiDDNS**

  **Steps:**

  (1) Choose the DDNS Type as HiDDNS.

  ![HiDDNS Settings](image)

  **Figure 7-6 HiDDNS Settings**

  (1) Enter the Server Address `www.hiddns.com`.

  (2) Enter the Domain name of the camera. The domain is the same with the device alias in the HiDDNS server.

  (3) Click **Save** to save the new settings.

  **Note:** Reboot the device to make the settings take effect.

### 7.4 Configuring PPPoE Settings

**Steps:**

1. Enter the PPPoE Settings interface: **Configuration > Advance Configuration > Network > PPPoE**
2. Check the **Enable PPPoE** checkbox to enable this feature.

3. Enter **User Name**, **Password**, and **Confirm** password for PPPoE access.

    **Note:** The User Name and Password should be assigned by your ISP.

    - **For your privacy and to better protect your system against security risks,** we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.

    - **Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.**

4. Click **Save** to save and exit the interface.

    **Note:** A reboot is required for the settings to take effect.

### 7.5 Configuring SNMP Settings

**Purpose:**

You can set the SNMP function to get camera status, parameters and alarm related information, and manage the camera remotely when it is connected to the network.

**Before you start:**
Before setting the SNMP, please download the SNMP software and manage to receive the camera information via SNMP port. By setting the Trap Address, the camera can send the alarm event and exception messages to the surveillance center. 

**Note:** The SNMP version you select should be the same as that of the SNMP software. And you also need to use the different version according to the security level you required. SNMP v1 provides no security and SNMP v2 requires password for access. And SNMP v3 provides encryption and if you use the third version, HTTPS protocol must be enabled.

- **For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.**
- **Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.**

**Steps:**

1. Enter the SNMP Settings interface: **Configuration > Advance Configuration > Network >SNMP.**
2. Check the checkbox of Enable SNMPv1, Enable SNMP v2c, Enable SNMPv3 to enable the feature correspondingly.

3. Configure the SNMP settings.

   **Note:** The settings of the SNMP software should be the same as the settings you configure here.

4. Click **Save** to save and finish the settings.

**Notes:**
7.6 Configuring QoS Settings

Purpose:
QoS (Quality of Service) can help solve the network delay and network congestion by configuring the priority of data sending.

Steps:
1. Enter the QoS Settings interface: Configuration > Advance Configuration > Network > QoS

![QoS Settings](image)

2. Configure the QoS settings, including Video/Audio DSCP, Event/Alarm DSCP and Management DSCP.

   The valid value range of the DSCP is 0 to 63. The bigger the DSCP value is, the higher the priority is.

   **Note:** DSCP refers to the Differentiated Service Code Point; and the DSCP value is used in the IP header to indicate the priority of the data.

3. Click **Save** to save the settings.

   **Note:** A reboot is required for the settings to take effect.

7.7 Configuring FTP Settings

Purpose:
You can configure the FTP server related information to enable the uploading of the captured pictures to the FTP server. The captured pictures can be triggered by events or a timing snapshot task.

**Steps:**

1. Enter the FTP Settings interface: **Configuration > Advance Configuration > Network > FTP.**

   ![FTP Settings](image)

   Figure 7-10 FTP Settings

2. Input the FTP address and port.

3. Configure the FTP settings; and the user name and password are required for the FTP server login.

   - For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.

   - Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
4. Set the directory structure and picture filing interval.

**Directory:** In the **Directory Structure** field, you can select the root directory, parent directory and child directory. When the parent directory is selected, you have the option to use the Device Name, Device Number or Device IP for the name of the directory; and when the Child Directory is selected, you can use the Camera Name or Camera No. as the name of the directory.

**Picture Filing Interval:** For better picture management, you can set the picture filing interval from 1 day to 30 days. Pictures captured in the same time interval will be saved in one folder named after the beginning date and ending date of the time interval.

**Picture Name:** Set the naming rule for captured picture files. You can choose **Default** in the drop-down list to use the default rule, that is,

\[
\text{IP address\_channel\_number\_capture\_time\_event\_type.jpg}
\]

(e.g., `10.11.37.189_01_20150917094425492_FACE_DETECTION.jpg`). Or you can customize it by adding a **Custom Prefix** to the default naming rule.

5. Check the Upload Picture checkbox to enable the function.

**Upload Picture:** To enable uploading the captured picture to the FTP server.

**Anonymous Access to the FTP Server (in which case the user name and password won't be required):** Check the **Anonymous** checkbox to enable the anonymous access to the FTP server.

**Note:** The anonymous access function must be supported by the FTP server.

6. Click **Save** to save the settings.

### 7.8 Configuring Email Settings

**Purpose:**

The system can be configured to send an Email notification to all designated receivers if an alarm event is detected, e.g., motion detection event, video loss, video tampering, etc.

**Before you start:**
Please configure the DNS Server settings under *Configuration > Advance Configuration > Network > TCP/IP* before using the Email function.

**Steps:**

1. Enter the TCP/IP Settings (*Configuration > Advance Configuration > Network > TCP/IP*) to set the IPv4 Address, IPv4 Subnet Mask, IPv4 Default Gateway and the Preferred DNS Server.

2. Enter the Email Settings interface: *Configuration > Advance Configuration > Network > Email*.

3. Configure the following settings:

   **Sender:** The name of the email sender.
   
   **Sender's Address:** The email address of the sender.
   
   **SMTP Server:** IP address or host name (e.g., smtp.263xmail.com) of the SMTP Server.
   
   **SMTP Port:** The SMTP port. The default TCP/IP port for SMTP is 25 (not secured). And the SSL SMTP port is 465.
   
   **Email Encryption:** None, SSL, and TLS are selectable. When you select SSL or TLS and disable STARTTLS, e-mails will be sent after encrypted by SSL or TLS. The SMTP port should be set as 465 for this encryption method. When you select SSL or TLS and enable STARTTLS, emails will be sent after encrypted by STARTTLS, and the SMTP port should be set as 25.

   **Note:** If you want to use STARTTLS, make sure that the protocol is supported by your e-mail server. If you check the Enable STARTTLS checkbox when the protocol is not supported by your e-mail server, your e-mail will not be encrypted.

   **Attached Image:** Check the checkbox of Attached Image if you want to send emails with attached alarm images.

   **Interval:** The interval refers to the time between two actions of sending attached pictures.

   **Authentication** (optional): If your email server requires authentication, check this checkbox to use authentication to log in to this server and input the login user name and password.
For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.

Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

The **Receiver** table: Select the receiver to which the email is sent. Up to 3 receivers can be configured.

**Receiver**: The name of the user to be notified.

**Receiver's Address**: The email address of user to be notified.

![Email Settings](image)

**Figure 7-11 Email Settings**

4. Click **Save** to save the settings.
7.9 Configuring NAT Settings

Purpose:
NAT interface allows you to configure the UPnP™ parameters. Universal Plug and Play (UPnP™) is a networking architecture that provides compatibility among networking equipment, software and other hardware devices. The UPnP protocol allows devices to connect seamlessly and to simplify the implementation of networks in the home and corporate environments. With the function enabled, you don’t need to configure the port mapping for each port, and the camera is connected to the Wide Area Network via the router.

Steps:
1. Enter the NAT settings interface. Configuration > Advance Configuration > Network > NAT.
2. Check the checkbox to enable the Port Mapping function.
3. Select the port mapping mode. Manual and Auto are selectable. And for manual port mapping, you can customize the value of the external port.
4. Click Save to save the settings.

![NAT Settings](image)

Figure 7-12 NAT Settings

7.10 Configuring Platform Access Settings

Purpose:
Platform access provides you an option to manage the devices via platform.

**Steps:**

1. Enter the Platform Access settings interface: Configuration > Advance Configuration > Network > Platform Access

   ![Platform Access](image)

   Figure 7-13 Platform Access

2. Check the checkbox of Enable to enable the platform access function of the device.

3. Click Save to save the settings.

### 7.11 Configuring HTTPS Settings

**Purpose:**

HTTPS provides authentication of the web site and its associated web server, which protects against Man-in-the-middle attacks. Perform the following steps to set the port number of https.

E.g., If you set the port number as 443 and the IP address is 192.168.1.64, you may access the device by inputting https://192.168.1.64:443 via the web browser.

**Steps:**

1. Enter the HTTPS settings interface. Configuration > Advance Configuration > Network > HTTPS.

2. Check the checkbox of Enable to enable the function.
3. Create the authorized certificate.
   - Create the authorized certificate
     (1) Select **Create the certificate request first and continue the installation** as the Installation Method.
     (2) Click **Create** button to create the certificate request. Fill in the required information in the popup window.
(3) Download the certificate request and submit it to the trusted certificate authority for signature.

(4) After receiving the signed valid certificate, import the certificate to the device.

4. There will be the certificate information after your successfully creating and installing the certificate.

![Figure 7-16 Installed Certificate](image)

5. Click the **Save** button to save the settings.
Chapter 8  Video/Audio Settings

Purpose:
Follow the instructions below to configure the video setting, audio settings, ROI, and Display info. on Stream.

8.1 Configuring Video Settings

Steps:
1. Enter the Video Settings interface, Configuration > Advance Configuration > Video/Audio > Video

2. Select the Stream Type of the camera to main stream (normal), sub-stream or third stream.
   
   Note: The main stream is usually for recording and live view with good bandwidth, and the sub-stream can be used for live view when the bandwidth is limited.

3. You can customize the following parameters for the selected stream type.

   Video Type:
Select the stream type to video stream, or video & audio composite stream. The audio signal will be recorded only when the Video Type is Video & Audio.

**Resolution:**
Select the resolution of the video output.

**Bitrate Type:**
Select the bitrate type to constant or variable.

**Video Quality:**
When bitrate type is selected as Variable, 6 levels of video quality are selectable.

**Frame Rate:**
Set the frame rate. The frame rate is to describe the frequency at which the video stream is updated and it is measured by frames per second (fps). A higher frame rate is advantageous when there is movement in the video stream, as it maintains image quality throughout.

**Max. Bitrate:**
Set the max. bitrate from 32 to 16384 Kbps. The higher value corresponds to the higher video quality, but the better bandwidth is required.

*Note:* The maximum limit of the max. bitrate value varies according to different camera platforms. For certain cameras, the maximum limit is 8192 Kbps or 12288 Kbps.

**Video Encoding:**
If the Stream Type is set to main stream, H.264 and H.265 are selectable, and if the stream type is set to sub stream or third stream, H.264, MJPEG, and H.265 are selectable. H.265 is a new encoding technology. Compared with H.264, it reduces the transmission bitrate under the same resolution, frame rate and image quality.

*Note:* Selectable video encoding types may vary according to different camera modes.

**Max. Average Bitrate:**
When you set a maximum bitrate, its corresponding recommended maximum average bitrate will be shown in the Max. Average Bitrate box. You can also set the maximum average bitrate manually from 32 Kbps to the value of the set maximum
bitrate.

**Profile:**
Basic profile, Main Profile, and High Profile for coding are selectable.

**I Frame Interval:**
Set I Frame Interval from 1 to 400.

**SVC:**
Scalable Video Coding is an extension of the H.264/AVC standard. Select OFF/ON to disable/enable the SVC function. Select Auto and the device will automatically extract frames from the original video when the network bandwidth is insufficient.

**Smoothing:**
It refers to the smoothness of the stream. The higher value of the smoothing is, the better fluency of the stream will be, though, the video quality may not be so satisfactory. The lower value of the smoothing is, the higher quality of the stream will be, though it may appear not fluent.

4. Click **Save** to save the settings.

*Note:*
The video parameters vary according to different camera models. Refer to the actual display page for camera functions.

### 8.2 Configuring Audio Settings

**Steps:**
1. Enter the Audio Settings interface: **Configuration** > **Advance Configuration** > **Video/Audio** > **Audio.**
2. Configure the following settings.

*Note:* Audio settings vary according to different camera models.

**Audio Encoding:** G.711 ulaw, G.711alaw, G.726, MP2L2 and PCM are selectable. For MP2L2, the Sampling Rate and Audio Stream Bitrate are configurable. For PCM, the Sampling Rate can be set.

**Audio Input:** MicIn is selectable for the connected microphone and pickup respectively.

**Input Volume:** 0-100 adjustable.

**Environmental Noise Filter:** Set it as OFF or ON. When the function is enabled, the noise in the environment can be filtered to some extent.

3. Click **Save** to save the settings.

### 8.3 Configuring ROI Encoding

**Purpose:**

ROI (Region of Interest) encoding helps to discriminate the ROI and background information in video compression, which means, the technology assigns more encoding resource to the region of interest, thus to increase the quality of the ROI whereas the background information is less focused.

*Note:* ROI function varies according to different camera models.
Steps:

1. Enter the ROI settings interface: **Configuration** > **Advance Configuration** > **Video/Audio** > **ROI**.

2. Select the Stream Type for ROI encoding.

3. Check the checkbox of **Enable** under **Fixed Region** item.

4. Set **Fixed Region** for ROI.
   
   (1) Select the Region No. from the drop-down list.

   (2) Check the **Enable** checkbox to enable ROI function for the chosen region.

   (3) Click **Drawing**. Click and drag the mouse on the view screen to draw a red rectangle as the ROI region. You can click **Clear** to cancel former drawing. Click **Stop Drawing** when you finish.

   (4) Select the ROI level.

   (5) Enter a region name for the chosen region.
(6) Click Save the save the settings of ROI settings for chosen fixed region.

(7) Repeat steps (1) to (6) to setup other fixed regions.

5. Click Save to save the settings.

Note: ROI level means the image quality enhancing level. The larger the value is, the better the image quality would be.

8.4 Display Info. on Stream

Check the checkbox of Enable Dual-VCA, and the information of the objects (e.g. human, vehicle, etc.) will be marked in the video stream. Then, you can set rules on the connected rear-end device to detect the events including line crossing, intrusion, etc.

Figure 8-4 Display Info. on Stream

Chapter 9 Image Settings

Purpose:
Follow the instructions in this chapter to configure the image parameters, including display settings, OSD settings, privacy mask, and text overlay.

9.1 Configuring Display Settings

Purpose:
Configure the image adjustment, exposure settings, day/night switch, backlight settings, white balance, image enhancement, video adjustment, and other parameters in display settings.
Note: The display parameters vary according to the different camera models. Please refer to the actual interface for details.

9.1.1 Day/Night Auto-Switch

Steps:
1. Enter the Display Settings interface, Configuration > Advance Configuration > Image > Display Settings.

![Image of Display Settings interface]

Figure 9-1 Display Settings of Day/Night Auto-Switch

2. Set the image parameters of the camera.

Note: In order to guarantee the image quality in different illumination, it provides two sets of parameters for users to configure.

- **Image Adjustment**
  - **Brightness** describes bright of the image, which ranges from 1 to 100.
  - **Contrast** describes the contrast of the image, which ranges from 1 to 100.
  - **Saturation** describes the colorfulness of the image color, which ranges from 1 to 100.
Sharpness describes the edge contrast of the image, which ranges from 1 to 100.

- **Exposure Settings**

  If the camera is equipped with the fixed lens, only Manual is selectable, and the iris mode is not configurable.

  If Auto is selected, you can set the auto iris level from 0 to 100.

  The Exposure Time refers to the electronic shutter time, which ranges from 1 to 1/100,000s. Adjust it according to the actual luminance condition.

  Gain of image can also be manually configured from 0 to 100. The bigger the value is, the brighter would the image be, and the noise would also be amplified to a larger extent.

![Exposure Settings](image)

**Figure 9-2 Exposure Settings**

- **Day/Night Switch**

  Select the Day/Night Switch mode according to different surveillance demand.

  Day, Night, Auto, Scheduled-Switch, and Triggered by alarm input are selectable for day/night switch.

![Day/Night Switch](image)

**Figure 9-3 Day/Night Switch**

**Day**: the camera stays at day mode.

**Night**: the camera stays at night mode.

**Auto**: the camera switches between the day mode and the night mode according to the illumination automatically. The sensitivity ranges from 0 to 7, the higher
the value is, the easier the mode switches. The filtering time refers to the interval time between the day/night switch. You can set it from 5s to 120s.

**Scheduled-Switch:** Set the start time and the end time to define the duration for day/night mode.

**Triggered by alarm input:** The switch is triggered by alarm input. You can set the triggered mode to day or night.

**Smart IR:** Set the supplement light as ON, and the device can adjust the supplement by adjusting the distance. E.g., if the object is near the camera, the device adjusts the supplement light to lower power, and the light is in higher power if the object is far away.

- **Backlight Settings**
  - **BLC Area:** If you focus on an object against strong backlight, the object will be too dark to be seen clearly. BLC compensates light to the object in the front to make it clear. OFF, Up, Down, Left, Right, Center, Auto, and Custom are selectable.
  
  *Note:* If BLC mode is set as Custom, you can draw a red rectangle on the live view image as the BLC area.

- **WDR:** Wide Dynamic Range can be used when there is a high contrast of the bright area and the dark area of the scene.

- **HLC:** High Light Compression function can be used when there are strong lights in the scene affecting the image quality.

<table>
<thead>
<tr>
<th>Backlight Settings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>BLC Area</strong></td>
</tr>
<tr>
<td><strong>WDR</strong></td>
</tr>
</tbody>
</table>

Figure 9-4 Backlight Settings

- **White Balance**

  White balance is the white rendition function of the camera used to adjust the color temperature according to the environment.
Network Camera User Manual

Figure 9-5 White Balance

- **Image Enhancement**

  **Digital Noise Reduction**: DNR reduces the noise in the video stream. OFF, Normal and Expert are selectable. Set the DNR level from 0 to 100 in Normal Mode. Set the DNR level from both space DNR level [0-100] and time DNR level [0-100] in Expert Mode.

  ![Image Enhancement](image)

  **Video Adjustment**

  **Mirror**: It mirrors the image so you can see it inverted. Left/Right, Up/Down, Center, and OFF are selectable.

  **Rotate**: To make a complete use of the 16:9 aspect ratio, you can enable the rotate function when you use the camera in a narrow view scene.

  When installing, turn the camera to the 90 degrees or rotate the 3-axis lens to 90 degrees, and set the rotate mode as on, you will get a normal view of the scene with 9:16 aspect ratio to ignore the needless information such as the wall, and get more meaningful information of the scene.

  **Video Standard**: 50 Hz and 60 Hz are selectable. Choose according to the different video standards; normally 50 Hz for PAL standard and 60 Hz for NTSC standard.

  **Capture Mode**: It’s the selectable video input mode to meet the different demands of field of view and resolution.
9.1.2 Day/Night Scheduled-Switch

Day/Night scheduled-switch configuration interface enables you to set the camera parameters for day and night separately, guaranteeing the image quality in different illumination.

Steps:
1. Click the calendar icon to select the start time and the end time of the switch.

Notes:
- The start time and end time refer to the valid time for day mode.
- The time period can start and end on two days in a row. For example, if you set start time as 10:00 and end time as 1:00, the day mode will be activated at
10 o'clock in the morning and stopped at 1 o'clock early in the next morning.

2. Click Common tab to configure the common parameters applicable to the day mode and night mode.

   **Note:** For the detailed information of each parameter, please refer to *Section 9.1.1 Day/Night Auto-Switch.*

3. Click Day tab to configure the parameters applicable for day mode.

4. Click Night tab to configure the parameters applicable for night mode.

   **Note:** The settings saved automatically if any parameter is changed.

### 9.2 Configuring OSD Settings

**Purpose:**

You can customize the camera name, time$date format, display mode, and OSD size displayed on the live view.

![OSD Settings Interface](image)

**Figure 9-9 OSD Settings**

**Steps:**

1. Enter the OSD Settings interface: *Configuration > Advance Configuration > Image > OSD Settings.*

2. Check the corresponding checkbox to select the display of camera name, date or
week if required.

3. Edit the camera name in the text field of Camera Name.

4. Select from the drop-down list to set the time format and date format.

5. Select from the drop-down list to set the time format, date format, display mode, OSD size and OSD color.

6. Configure the text overlay settings.
   
   (1) Check the check box in front of the textbox to enable the on-screen display.
   
   (2) Input the characters in the textbox.
   
   Note: Up to 8 text overlays are configurable.

7. Adjust the position and alignment of text frames.

   Left align, right align and custom are selectable. If you select custom, you can use the mouse to click and drag text frames in the live view window to adjust their positions.

   Note: The alignment adjustment is only applicable to Text Overlay items.

8. Click Save to save the settings.

9.3 Configuring Text Overlay

Purpose:

Text overlay enables you to overlay a text on the image. This function enables a certain enterprise or users to overlay their logo on the image.

Steps:

1. Enter the Text Overlay Settings interface, Configuration > Advance Configuration > Image > Text Overlay.
2. Check **Enable text Overlay** checkbox 1 to enable the function.
3. Input a text you want.
4. Click **Save** to save settings.

**Note:** There are 4 text that you can input, and the text can move if you want.

### 9.4 Configuring Privacy Mask

**Purpose:**
Privacy mask enables you to cover certain areas on the live video to prevent certain spots in the surveillance area from being live viewed and recorded.

**Steps:**
1. Enter the Privacy Mask Settings interface: **Configuration > Advance Configuration > Image > Privacy Mask.**
2. Check the checkbox of **Enable Privacy Mask** to enable this function.
3. Click **Draw Area.**

![Figure 9-10 Text Overlay](image-url)
4. Click and drag the mouse in the live video window to draw the mask area.

*Note:* You are allowed to draw up to 4 areas on the same image.

5. Click **Stop Drawing** to finish drawing or click **Clear All** to clear all of the areas you set without saving them.

6. Click **Save** to save the settings.

---

### Chapter 10  Security Settings

Configure the parameters, including User, Authentication, Anonymous Visit, IP Address Filter, and Security Service from security interface.

#### 10.1  User Management

*Purpose:*

The admin user can add, delete or modify user accounts, and grant them different permissions. We highly recommend you manage the user accounts and permissions properly.
Steps:

1. Enter the User Management interface: Configuration > Advanced Configuration > Security > User

![User Management Interface]

- **Adding a User**

  The admin user has all permissions by default and can create/modify/delete other accounts.

  The admin user cannot be deleted and you can only change the admin password.

  **Steps:**

  1. Click **Add** to add a user.
  2. Input the **User Name**, select **Level** and input **Password**.

  **Notes:**

  - Up to 31 user accounts can be created.
  - Users of different levels own different default permissions. Operator and user are selectable.

  **STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

  3. You can check or uncheck the permissions for the new user.
  4. Click **OK** to finish the user addition.
Figure 10-2 Add a User

- **Modifying a User**

  **Steps:**

  1. Left-click to select the user from the list and click **Modify**.

  2. Modify the **User Name**, **Level** and **Password**.

  > **STRONG PASSWORD RECOMMENDED**—We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

  4. You can check or uncheck the permissions.

  5. Click **OK** to finish the user modification.
Deleting a User

Steps:
1. Click to select the user you want to delete and click Delete.
2. Click OK on the pop-up dialogue box to confirm the deletion.

10.2 Authentication

Purpose:
You can specifically secure the stream data of live view.

Steps:
1. Enter the Authentication interface: Configuration > Advance Configuration > Security > Authentication.
2. Select the RTSP Authentication type **basic** or **disable** in the drop-down list to enable or disable the RTSP authentication.

*Note:* If you disable the RTSP authentication, anyone can access the video stream by the RTSP protocol via the IP address.

3. Click **Save** to save the settings.

### 10.3 IP Address Filter

**Purpose:**
This function makes it possible for access control.

**Steps:**

1. Enter the IP Address Filter interface: **Configuration > Advance Configuration > Security > IP Address Filter**

![Figure 10-5 IP Address Filter Interface](image)

2. Check the checkbox of **Enable IP Address Filter**.

3. Select the type of IP Address Filter in the drop-down list, **Forbidden** and **Allowed** are selectable.

4. Set the IP Address Filter list.
• Add an IP Address

**Steps:**

(1) Click the Add to add an IP.
(2) Input the IP Address.
(3) Click the OK to finish adding.

• Modify an IP Address

**Steps:**

(1) Left-click an IP address from filter list and click Modify.
(2) Modify the IP address in the text filed.
(3) Click the OK to finish modifying.

• Delete an IP Address or IP Addresses.

Select the IP address(es) and click Delete.

5. Click Save to save the settings.

### 10.4 Security Service

To enable the remote login, and improve the data communication security, the camera provides the security service for better user experience.

**Steps:**
1. Enter the security service configuration interface: \textit{Configuration} > \textit{Advance Configuration} > \textit{Security} > \textit{Security Service}.

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{security-service.png}
\caption{Security Service}
\end{figure}

2. Check the checkbox of \textbf{Enable SSH} to enable the data communication security, and uncheck the checkbox to disable the SSH.

3. Check the checkbox of \textbf{Enable Illegal Login Lock}, and then the IP address will be locked if the admin user performs 7 failed user name/password attempts (5 times for the operator/user).

\textit{Note:} If the IP address is locked, you can try to login the device after 30 minutes.
Chapter 11 Basic Event Settings

You can configure the basic events by following the instructions in this section, including motion detection, video tampering, alarm input, alarm output, and exception, etc. These events can trigger the linkage methods, such as Notify Surveillance Center, Send Email, Trigger Alarm Output, etc.

Note: Check the checkbox of Notify Surveillance Center if you want the alarm information to be pushed to PC or mobile client software as soon as the alarm is triggered.

11.1 Configuring Motion Detection

Purpose:
Motion detection detects the moving objects in the configured surveillance area, and a series of actions can be taken when the alarm is triggered.
In order to detect the moving objects accurately and reduce the false alarm rate, normal configuration and expert configuration are selectable for different motion detection environment.

- Normal Configuration
Normal configuration adopts the same set of motion detection parameters in the daytime and at night.

Tasks 1: Set the Motion Detection Area
Steps:
1. Enter the motion detection settings interface: Configuration > Advance Configuration > Basic Event > Motion Detection.
2. Check the checkbox of Enable Motion Detection.
3. Check the checkbox of Enable Dynamic Analysis for Motion if you want to mark the detected objects with green rectangles.
4. Click **Draw Area**. Click and drag the mouse on the live video to draw a motion detection area. Click **Stop Drawing** to finish drawing one area.

5. (Optional) Click **Clear All** to clear all of the areas.

6. (Optional) Move the slider to set the sensitivity of the detection.

**Task 2: Set the Arming Schedule for Motion Detection**

![Arming Schedule](image)

*Figure 11-2 Arming Schedule*

*Note:* time period, you can adjust the time period to the desired time by either moving the time bar or input the exact time period.
1. (Optional) Click Delete to delete the current arming schedule, or click Save to save the settings.

2. Move the mouse to the end of each day, a copy dialogue box pops up, and you can copy the current settings to other days.

3. Click Save to save the settings.

**Note:** The time of each period can’t be overlapped. Up to 8 periods can be configured for each day.

**Task 3: Set the Linkage Method for Motion Detection**

Check the checkbox to select the linkage method. Audible Warning, Send Email, Notify Surveillance Center, Upload to FTP/Memory Card/NAS, Trigger Channel and Trigger Alarm Output are selectable. You can specify the linkage method when an event occurs.

![Figure 11-3 Linkage Method](image)

**Note:** The linkage methods vary according to the different camera models.

- **Audible Warning**
  
  Trigger the audible warning locally. And it only supported by the device that have the audio output.

- **Notify Surveillance Center**

  Send an exception or alarm signal to remote management software when an event occurs.

- **Send Email**

  Send an email with alarm information to a user or users when an event occurs.
Note: To send the Email when an event occurs, please refer to Section 7.2.3 to complete Email setup in advance.

- **Upload to FTP/Memory Card/NAS**
  Capture the image when an alarm is triggered and upload the picture to a FTP server.

  **Notes:**
  - Set the FTP address and the remote FTP server first. Refer to Section 7.2.2 Configuring FTP Settings for detailed information.
  - Go to Configuration > Storage > Schedule Settings> Capture > Capture Parameters page, enable the event-triggered snapshot, and set the capture interval and capture number.
  - The captured image can also be uploaded to the available SD card or network disk.

- **Trigger Channel**
  The video will be recorded when the motion is detected. You have to set the recording schedule to realize this function. Please refer to Section 11.1 for detailed information.

- **Trigger Alarm Output**
  Trigger one or more external alarm outputs when an event occurs.

  Note: To trigger an alarm output when an event occurs, please refer to Section 10.1.4 Configuring Alarm Output to set the related parameters.

- **Expert Configuration**
  Expert mode is mainly used to configure the sensitivity and proportion of object on each area for different day/night switch.
Day/Night Switch OFF

Steps:
1. Draw the detection area as in the normal configuration mode. Up to 8 areas are supported.
2. Select OFF for Switch Day and Night Settings.
3. Select the area by clicking the area No.
4. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area.
5. Set the arming schedule and linkage method as in the normal configuration mode.
6. Click Save to save the settings.

Day/Night Auto-Switch

Steps:
1. Draw the detection area as in the normal configuration mode. Up to 8 areas are supported.
2. Select Auto-Switch for Switch Day and Night Settings.
3. Select the area by clicking the area No.
4. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area in the daytime.
5. Slide the cursor to adjust the sensitivity and proportion of object on the area for
the selected area at night.

6. Set the arming schedule and linkage method as in the normal configuration mode.

7. Click **Save** to save the settings.

**Day/Night Scheduled-Switch**

**Steps:**

1. Draw the detection area as in the normal configuration mode. Up to 8 areas are supported.

2. Select **Scheduled-Switch** for **Switch Day and Night Settings**.

   ![Day/Night Scheduled-Switch](image)
   
   Figure 11-5 Day/Night Scheduled-Switch

3. Select the start time and the end time for the switch timing.

4. Select the area by clicking the area No..

5. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area in the daytime.

6. Slide the cursor to adjust the sensitivity and proportion of object on the area for the selected area at night.

7. Set the arming schedule and linkage method as in the normal configuration mode.

8. Click **Save** to save the settings.

### 11.2 Configuring Video Tampering Alarm

**Purpose:**

You can configure the camera to trigger the alarm when the lens is covered and take certain alarm response actions.

**Steps:**

1. Enter the video tampering Settings interface, **Configuration > Advance Configuration > Basic Event > Video Tampering.**
2. Check **Enable Video Tampering** checkbox to enable the video tampering detection.

3. Set the video tampering area.

4. The default arming schedule for video tampering is 7*24 hours.

5. Check the checkbox to select the linkage method taken for the video tampering. Audible warning, notify surveillance center, send email and trigger alarm output are selectable.

6. Click **Save** to save the settings.

### 11.3 Configuring Alarm Input

**Steps:**

1. Enter the Alarm Input Settings interface: **Configuration > Advance Configuration >Basic Event > Alarm Input.**
2. Choose the alarm input No. and the Alarm Type. The alarm type can be NO (Normally Open) and NC (Normally Closed). Edit the name to set a name for the alarm input (optional).

![Alarm Input Settings](image)

Figure 11-8 Alarm Input Settings

3. Click **Arming Schedule** to set the arming schedule for the alarm input.

4. Click **Linkage Method** and check the checkbox to select the linkage method taken for the alarm input.

![Linkage Method](image)

Figure 11-9 Linkage Method

5. You can copy your settings to other alarm inputs.

6. Click **Save** to save the settings.
11.4 Configuring Alarm Output

Steps:

1. Enter the Alarm Output Settings interface: Configuration > Advance Configuration > Basic Event > Alarm Output.

2. Select one alarm output channel in the Alarm Output drop-down list. You can also set a name for the alarm output (optional).

3. The Delay time can be set to 5 sec, 10 sec, 30 sec, 1 min, 2 min, 5 min, 10 min or Manual. The delay time refers to the time duration that the alarm output remains in effect after alarm occurs.

4. Click Arming Schedule to enter the Edit Schedule Time interface. The time schedule configuration is the same as the settings of the arming schedule for motion detection.

5. You can copy the settings to other alarm outputs.

6. Click Save to save the settings.
11.5 Exception

The exception type can be HDD full, HDD error, network disconnected, IP address conflicted and illegal login to the cameras.

Steps:
1. Enter the Exception Settings interface: Configuration > Advance Configuration > Basic Event > Exception.
2. Check the checkbox to set the actions taken for the Exception alarm.

![Figure 11-11 Exception Settings](image)

3. Click Save to save the settings.

11.6 Configuring Other Alarm

PIR Alarm

Purpose:
A PIR (Passive Infrared) alarm is triggered when an intruder moves within the detector's field of view. The heat energy dissipated by a person, or any other warm blooded creature such as dogs, cats, etc., can be detected.

Steps:
1. Enter the PIR Alarm Settings interface:

   Configuration > Advance Configuration > Basic Event > Other Alarm
2. Check the checkbox of **Enable** to activate the PIR alarm function.

3. Input the alarm name in the text field as desired.

4. Check the checkbox to select the linkage methods taken for the PIR alarm.

5. Click the **Edit** button to set the arming schedule.

6. Click **Save** to save the settings.

**Chapter 12  Smart Event**

You can configure the smart events by following the instructions in this section, including line crossing detection and intrusion detection. These events can trigger the linkage methods, such as Notify Surveillance Center, Send Email, Trigger Alarm.
Output, etc.

12.1 Configuring Line Crossing Detection

*Purpose:*
Line crossing detection function detects people, vehicle or other objects which cross a pre-defined virtual line, and some certain actions can be taken when the alarm is triggered.

*Note:* Line crossing detection function varies according to different camera models.

*Steps:*
1. Enter the Line Crossing Detection settings interface, *Configuration > Advance Configuration > Smart Event > Line Crossing Detection.*

![Figure 12-1 Line Crossing Detection](image)

2. Check the checkbox of **Enable Line Crossing Detection** to enable the function.
3. Select the line from the drop-down list for detection settings.
4. Click **Area Settings** tab and click **Draw Area** button, and a virtual line is displayed on the live video.
5. Click-and-drag the line, and you can locate it on the live video as desired. Click on the line, two red squares are displayed on each end, and you can click-and-drag one of the red squares to define the shape and length of the line.

6. Select the direction for line crossing detection. And you can select the directions as A<->B, A ->B, and B->A.
   - A<->B: Only the arrow on the B side shows; when an object going across the plane with both direction can be detected and alarms are triggered.
   - A->B: Only the object crossing the configured line from the A side to the B side can be detected.
   - B->A: Only the object crossing the configured line from the B side to the A side can be detected.

7. Click-and-drag the slider to set the detection sensitivity.
   - **Sensitivity**: Range [1-100]. The higher the value is, the more easily the line crossing action can be detected.

8. Repeat the above steps to configure other lines. Up to 4 lines can be set. You can click the **Clear** button to clear all pre-defined lines.

9. Select the linkage methods for line crossing detection, including Notify Surveillance Center, Send Email, Upload to FTP/Memory Card/NAS, Trigger Channel and Trigger Alarm Output.

10. Click **Save** to save the settings.

### 12.2 Configuring Intrusion Detection

**Purpose:**

Intrusion detection function detects people, vehicle or other objects which enter and loiter in a pre-defined virtual region, and some certain actions can be taken when the alarm is triggered.

**Note:** Intrusion detection function varies according to different camera models.

**Steps:**
1. Enter the Intrusion Detection settings interface, Configuration > Advance Configuration > Smart Event > Intrusion Detection.

![Intrusion Detection Interface](image)

2. Check the checkbox of **Enable Intrusion Detection** to enable the function.

3. Select the region from the drop-down list for detection settings.

4. Click **Area Settings** tab and click **Draw Area** button to start the region drawing.

5. Click on the live video to specify the four vertexes of the detection region, and right click to complete drawing.

6. Set the time threshold, detection sensitivity and object percentage for intrusion detection.

**Threshold:** Range [0s-10s], the threshold for the time of the object loitering in the region. If you set the value as 0, alarm is triggered immediately after the object entering the region.

**Sensitivity:** Range [1-100]. The value of the sensitivity defines the size of the object which can trigger the alarm. When the sensitivity is high, a very small
object can trigger the alarm.

**Percentage:** Range [1-100]. Percentage defines the ratio of the in-region part of the object which can trigger the alarm. For example, if the percentage is set as 50%, when the object enters the region and occupies half of the whole region, the alarm is triggered.

7. Repeat the above steps to configure other regions. Up to 4 regions can be set. You can click the **Clear** button to clear all pre-defined regions.

8. Click **Linkage Method** to select the linkage methods for intrusion detection, including Notify Surveillance Center, Send Email, Upload to FTP/Memory Card/NAS, Trigger Channel and Trigger Alarm Output.

9. Click **Save** to save the settings.
Chapter 13 Storage Settings

Before you start:
To configure record settings, please make sure that you have the network storage device or local storage device configured.

13.1 Configuring Record Schedule

Purpose:
There are two kinds of recording for the cameras: manual recording and scheduled recording. In this section, you can follow the instructions to configure the scheduled recording. By default, the record files of scheduled recording are stored in the local storage or in the network disk.

Steps:
1. Enter the Record Schedule Settings interface: Configuration > Advance Configuration > Storage > Record Schedule.

Figure 13-1 Recording Schedule Interface
2. Set the camera record parameters.

<table>
<thead>
<tr>
<th>Pre-record</th>
<th>5s</th>
</tr>
</thead>
<tbody>
<tr>
<td>Post-record</td>
<td>5s</td>
</tr>
<tr>
<td>Overwrite</td>
<td>Yes</td>
</tr>
<tr>
<td>Recording Stream</td>
<td>Main Stream</td>
</tr>
</tbody>
</table>

Figure 13-2 Record Parameters

- **Pre-record**: The time you set to start recording before the scheduled time or the event. For example, if an alarm triggers recording at 10:00, and the pre-record time is set as 5 seconds, the camera starts to record at 9:59:55.
  The Pre-record time can be configured as No Pre-record, 5s, 10s, 15s, 20s, 25s, 30s or not limited.

- **Post-record**: The time you set to stop recording after the scheduled time or the event. For example, if an alarm triggered recording ends at 11:00, and the post-record time is set as 5 seconds, the camera records until 11:00:05.
  The Post-record time can be configured as 5s, 10s, 30s, 1 min, 2 min, 5 min or 10 min.

- **Stream Type**: Select the stream type for recording.

  *Note*: The record parameter configurations vary depending on the camera model.

3. Check the checkbox of **Enable** to enable scheduled recording.

4. Select a **Record Type**. The record type can be Continuous, Motion Detection, Alarm, Motion | Alarm, Motion & Alarm, and Event.

   - **Continuous**
     If you select **Continuous**, the video will be recorded automatically according to the time of the schedule.

   - **Record Triggered by Motion Detection**
     If you select **Motion Detection**, the video will be recorded when the motion is detected.

   Besides configuring the recording schedule, you have to set the motion
detection area and check the checkbox of Trigger Channel in the Linkage Method of Motion Detection Settings interface. For detailed information, please refer to the Task 1: Set the Motion Detection Area in the Section 10.1.1.

- **Record Triggered by Alarm**
  If you select Alarm, the video will be recorded when the alarm is triggered via the external alarm input channels.
  Besides configuring the recording schedule, you have to set the Alarm Type and check the checkbox of Trigger Channel in the Linkage Method of Alarm Input Settings interface. For detailed information, please refer to Section 10.1.3.

- **Record Triggered by Motion & Alarm**
  If you select Motion & Alarm, the video will be recorded when the motion and alarm are triggered at the same time.
  Besides configuring the recording schedule, you have to configure the settings on the Motion Detection and Alarm Input Settings interfaces. Please refer to Section 10.1.1 and Section 10.1.3 for detailed information.

- **Record Triggered by Motion | Alarm**
  If you select Motion | Alarm, the video will be recorded when the external alarm is triggered or the motion is detected.
  Besides configuring the recording schedule, you have to configure the settings on the Motion Detection and Alarm Input Settings interfaces. Please refer to Section 10.1.1 and Section 10.1.3 for detailed information.

- **Record Triggered by Events**
  If you select Event, the video will be recorded if any of the events is triggered.
  Besides configuring the recording schedule, you have to configure the event settings.

5. Select the record type, and click-and-drag the mouse on the time bar to set the record schedule.

6. Click Save to save the settings.
13.2 Configuring Storage Management

**Purpose:**
With memory card input, you can view the memory card status.

**Steps:**
1. Enter storage management configuration interface:
   
   **Configuration > Advance Configuration > Storage > Storage Management**

   ![Figure 13-3 Storage Management](image)

2. View the memory card status on **HDD Device List**.
3. The TF card must format first before use, then the status show normal.
4. The percentage of picture and the percentage of record can be set.
5. Click **Save** to save the settings.

13.3 Configuring NAS

**Before you start:**
The network disk should be available within the network and properly configured to store the recorded files, log files, pictures, etc.

**Steps:**
1. Add Net HDD.
(1) Enter the NAS settings interface, Configuration > Advance Configuration > Storage > NAS

Figure 13-4 Add Network Disk

(2) Enter the IP address of the network disk, and enter the file path.

(3) Select the mounting type. NFS and SMB/CIFS are selectable. And you can set the user name and password to guarantee the security if SMB/CIFS is selected.

Note: Please refer to the NAS User Manual for creating the file path.

For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.

Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

(4) Click Save to add the network disk.

2. Initialize the added network disk.
(1) Enter the HDD Settings interface, **Configuration > Storage > Storage Management > HDD Management**, in which you can view the capacity, free space, status, type and property of the disk.

![Figure 13-5 Storage Management Interface](image1)

(2) If the status of the disk is **Uninitialized**, check the corresponding checkbox to select the disk and click **Format** to start initializing the disk.

When the initialization completed, the status of disk will become **Normal**.

![Figure 13-6 View Disk Status](image2)

3. Define the quota for record and pictures.
   (1) Input the quota percentage for picture and for record.
   (2) Click **Save** and refresh the browser page to activate the settings.
Note:
Up to 8 NAS disks can be connected to the camera.

13.4 Configuring Snapshot

Purpose:
You can configure the scheduled snapshot and event-triggered snapshot. The captured picture can be stored in the local storage or network storage.

Steps:
2. Enter the Capture Settings interface: Configuration > Advance Configuration > Storage > Snapshot.
3. Check the Enable Timing Snapshot checkbox to enable continuous snapshot.
   (1) Select the picture format, resolution, quality and capture interval.
   (2) Check the Enable Event-triggered Snapshot checkbox to enable event-triggered snapshot.
   (3) Select the picture format, resolution, quality, capture interval, and capture number.
Figure 13-8 Set Capture Parameters

4. Set the time interval between two snapshots.

5. Click **Save** to save the settings.
Chapter 14 Playback

Purpose:
This section explains how to view the remotely recorded video files stored in the network disks or memory cards.

Steps:
1. Click **Playback** on the menu bar to enter playback interface.

![Playback Interface](image1)

Figure 14-1 Playback Interface

2. Select the date and click **Search**.

![Search Video](image2)

Figure 14-2 Search Video
3. Click ➤ to play the video files found on this date.

The toolbar on the bottom of Playback interface can be used to control playing process.

Appendix 1 SADP Software Introduction

- **Description of SADP**

  SADP (Search Active Devices Protocol) is a kind of user-friendly and installation-free online device search tool. It searches the active online devices within your subnet and displays the information of the devices. You can also modify the basic network information of the devices using this software.

- **Search active devices online**

  - **Search online devices automatically**

    After launch the SADP software, it automatically searches the online devices every 15 seconds from the subnet where your computer locates. It displays the total number and information of the searched devices in the Online Devices interface. Device information including the device type, IP address and port number, etc. will be displayed.

![Figure A.1.1 Searching Online Devices](image)
Note:
Device can be searched and displayed in the list in 15 seconds after it went online; it will be removed from the list in 45 seconds after it went offline.

♦ Search online devices manually

You can also click to refresh the online device list manually. The newly searched devices will be added to the list.

You can click or on each column heading to order the information; you can click to expand the device table and hide the network parameter panel on the right side, or click to show the network parameter panel.

♦ Modify network parameters

Steps:
1. Select the device to be modified in the device list and the network parameters of the device will be displayed in the Modify Network Parameters panel on the right side.
2. Edit the modifiable network parameters, e.g. IP address and port number.
3. Enter the password of the admin account of the device in the Password field and click to save the changes.

For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.

Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
Figure A.1.2 Modify Network Parameters
Appendix 2 Port Mapping

The following settings are for TP-LINK router (TL-WR641G). The settings vary depending on different models of routers.

Steps:

1. Select the **WAN Connection Type**, as shown below:

   ![Figure A.2.1 Select the WAN Connection Type](image)

2. Set the **LAN** parameters of the router as in the following figure, including IP address and subnet mask settings.

   ![Figure A.2.2 Set the LAN parameters](image)

3. Set the port mapping in the virtual servers of **Forwarding**. By default, camera uses port 80, 8000 and 554. You can change these ports value with web browser or client software.

   **Example:**

   When the cameras are connected to the same router, you can configure the ports of a camera as 80, 8000, and 554 with IP address 192.168.1.23, and the ports of
another camera as 81, 8001, 555, 8201 with IP 192.168.1.24. Refer to the steps as below:

Steps:

1. As the settings mentioned above, map the port 80, 8000, 554 and 8200 for the network camera at 192.168.1.23
3. Enable **ALL** or **TCP** protocols.
4. Check the **Enable** checkbox and click **Save** to save the settings.

![](image)

Figure A.2.3 Port Mapping

**Note:** The port of the network camera cannot conflict with other ports. For example, some web management port of the router is 80. Change the camera port if it is the same as the management port.
